 BIM is a global phenomenon which is gaining significant momentum across the world Currently there is little information on
 how to realise and monitor benefits from implementing BIM across the life cycle of a built environment asset This book
 provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation
 Management theory It presents an approach for practitioners aiming to implement BIM across the life cycle of built
 environment assets including both buildings and infrastructure Additionally the book features wide ranging information
 about BIM the challenges of monitoring progress towards benefit goals and the greater context of implementation a set of
 dictionaries that illustrate how benefits can be achieved what the benefit flows are and the enabling tools and processes that
 contribute to achieving and maximising them a suite of measures that can serve to monitor progress with examples of how
 they have been used to measure benefits from BIM real world examples from across the world and life cycle phases that
 show how these benefits can be achieved and information on international maturity and competency measures to
 complement the value realisation framework Including a blend of academic and industry input this book has been developed
 in close collaborative consultation with industry government and international research organisations and could be used for
 industry courses on BIM benefits and implementation for asset management or by universities that teach BIM related
 courses Sustainable Communities through Digital Transformation Yusuf Arayici, Niraj Thurairajah, Bimal
