Transportation Research Board, 2004 TRB's Transportation Research Record Journal of the Transportation Research Board 1867 examines several algorithms that estimate speed from traffic surveillance cameras in a variety of traffic weather and lighting conditions identify bottleneck locations the active times and the delays that are caused and are applied to the archived loop detector data in the I 4 data warehouse **Traffic Control Systems Handbook**, 1996 This Traffic Control Systems Handbook updates the 1985 edition FHWA IP 85 11 TRIS 00475445 and broadens the scope to include Intelligent Transportation Systems ITS technology and concepts The Handbook recommends decision making processes in selection implementation and operations of a traffic control system and describes ITS plans and programs The Traffic Control Systems Handbook serves as a basic reference in planning designing and implementing effective traffic control systems provides an updated compendium of existing traffic control technology for the advanced designer and user describes existing and evolving traffic control system technology and aids understanding and facilitates training in the traffic control system field Vehicle Navigation and Information Systems Vehicle Navigation and Information Systems Conference (Oslo Plaza, Norway)), 1994 *Best ITS Management Practices and Technologies for Ohio* Edd Hauser, 2001 To address congestion and safety concerns on Ohio's Macro Highway System the following priorities were identified in this research report as solutions in urban areas 1 incident management 2 arterial signal coordination primarily the responsibility of local governments and 3 traffic control during construction and maintenance activities On rural sections of highway maintained by ODOT the priorities identified for improvement are 1 traffic control during construction and maintenance activities 2 weather snow and ice monitoring and 3 advanced traveler information systems Specific technologies were explored in four areas that were identified to be of primary interest to ODOT traffic detection traffic controllers dynamic message signs and communications technologies The following specific recommendations were made 1 that ODOT pursue installation and use of nonintrusive detection methods wherever practical 2 that ODOT continue its direction of procuring and installing 2070 Lite controllers and develop the capability to maintain these devices as well 3 that limited use be made of the large dynamic message signs that are typically mounted on sign bridges over multiple lanes of freeways and

that smaller cantilever mounted or median mounted signs be used in most situations and 4 that a common ITS communications architecture master plan be defined for each region to establish cost effective deployment and operations of field devices and center components It was further recommended that collocation of police and fire agencies be integral to ITS investments in urban areas of Ohio Flexibility is the key to district staffing levels during the next several years of ITS deployment To address equity issues ODOT should centralize ITS operations and maintenance funding until ITS deployment becomes more widespread and integrated into District Offices planning and operations and into the Central Office functions including most major units within the Department

Guidelines for Determination of Optimal Traffic Responsive Plan Selection Control Parameters ,2005 Closed loop traffic control systems can be operated by either Time of Day TOD mode or Traffic Responsive Plan Selection TRPS mode When properly configured the TRPS mode has the potential to provide an optimal operation due to its ability to accommodate abnormal traffic conditions such as incidents special events and holiday traffic TRPS mode can also reduce the need for frequent redesign updates to signal timing plans To date there have not been any formal guidelines for selection of robust and optimal TRPS system parameters and thresholds Consequently traffic engineers usually revert to the TOD mode of operation for its ease of setup This report provides a new methodology for robust and optimal selection of TRPS parameters and thresholds The report presents an innovative framework of TRPS system setup following a comprehensive approach that incorporates a multi objective evolutionary algorithm and a supervised discriminant analysis The developed guidelines are presented in simplified tables to facilitate their implementation Guidelines were verified by using hardware in the loop simulations Compared to just the worst possible solutions encountered during the optimization the final solution provided a concurrent savings of 53 percent in delay and 19 percent in stops
