Philosophy at The University of Hong Kong in August 2005 Starvation has been shown to affect various physiological functions and peptide levels of the gastrointestinal tract However the effects of starvation on adrenomedullin AM levels in the digestive system have not been studied Since AM has been shown to be present throughout the digestive system and may be an important regulator of gastrointestinal functions we hypothesize that starvation may affect the AM system in the digestive system The present study investigates the effects of acute 1 day and chronic 4 day starvation on the levels of immunoreactive AM ir AM and gene expressions of preproAM and AM receptors in the gastrointestinal system The effects of acute starvation and AM on glucose uptake in isolated hepatocytes are also investigated During acute starvation only the gene expression of preproAM in the fundus of the stomach was up regulated After chronic starvation the concentrations of ir AM in both the fundus and pylorus were significantly increased An up regulation in preproAM gene expression was also detected in the pylorus These changes might suggest that the secretion of AM might be reduced in the fundus but increased in the pylorus as starvation was prolonged Moreover marked reductions in the gene expressions of fundic calcitonin receptor like receptor CRLR and receptor activity modifying protein RAMP 3 as well as the pyloric CRLR and RAMP2 were observed in the chronically starved rats Regarding the pancreas the ir AM contents were reduced following chronic starvation suggesting a possible increase in the inhibitory action of AM on pancreatic insulin release In the liver the CRLR mRNA expression was found to be down regulated The lack of changes in plasma ir AM levels in the courses of acute and chronic starvation was strongly suggestive of the paracrine action of AM in the digestive system In the liver AM immunoreactivity was detected in the parenchymal and stellate cells lining the sinusoid suggesting that AM might play a role in the regulation of hepatic metabolism and circulation In isolated hepatocytes from acutely starved rats the uptake of glucose glycerol and alanine was markedly lower than those from the fed rats A high AM concentration 1000 nM increased the insulin stimulated glucose uptake by more than 2 fold whereas lower AM concentrations 10 and 100 nM reduced the glucagon induced alanine uptake The gene expression of RAMP1 was up regulated by glucose and that of preproAM was increased by glycerol In similar preparations from fed rats 1000 nM AM enhanced the basal and insulin induced glucose uptake Both glucose and glycerol were found to increase the gene expressions of preproAM and RAMP1 These findings showed that AM might play some roles in the modulation of glucose uptake in hepatocytes The present study suggests that acute starvation may increase the secretion of AM in the fundus During chronic starvation the release of AM may be reduced in the liver and fundus but may be augmented in the pancreas and pylorus In isolated hepatocytes from acutely starved rats the uptake of glucose is reduced whereas a high concentration of AM can increase the insulin induc *The Digestive System Anatomical Chart* Anatomical Chart Company,Anatomical Chart Company Staff,2000-01-28 This popular chart of The Digestive System clearly illustrates the organs that make up the digestive system All structures are labeled The beautiful central image shows the esophagus liver stomach sectioned to show inside walls gallbladder pancreas intestines rectum arteries and veins Includes illustration of
