Natural Language Generation Systems Symbolic Computation:

Natural Language Generation Systems David D. McDonald,Leonard Bolc,2012-12-06 Natural language generation is a field within artificial intelligence which looks ahead to the future when machines will communicate complex thoughts to their human users in a natural way Generation systems supply the sophisticated knowledge about natural languages that must come into play when one needs to use wordings that will overpower techniques based only on symbolic string manipulation techniques Topics covered in this volume include discourse theory mechanical translation deliberate writing and revision Natural Language Generation Systems contains contributions by leading researchers in the field Chapters contain details of grammatical treatments and processing seldom reported on outside of full length monographs   Encyclopedia of Library and Information Science Allen Kent,1998-05-15 Automated Discourse Generation to the User Centered Revolution 1970 1995

Advances in Big Data and Cloud Computing J. Dinesh Peter,Amir H. Alavi,Bahman Javadi,2018-12-12 This book is a compendium of the proceedings of the International Conference on Big Data and Cloud Computing It includes recent advances in the areas of big data analytics cloud computing internet of nano things cloud security data analytics in the cloud smart cities and grids etc This volume primarily focuses on the application of the knowledge that promotes ideas for solving the problems of the society through cutting edge technologies The articles featured in this proceeding provide novel ideas that contribute to the growth of world class research and development The contents of this volume will be of interest to researchers and professionals alike   **Echnology Assessment in Software Applications** Harold F. O'Neil, Jr.,Eva Baker,Harold F. O'Neil,2013-11-05 This volume offers an expansion of ideas presented at a recent conference convened to identify the major strategies and more promising practices for assessing technology The authors representing government business and university sectors helped to set the boundaries of present technology assessment by offering perspectives from computer science cognitive and military psychology and education Their work explores both the use of techniques to assess technology and the use of technology to facilitate the assessment process The book s main purpose is to portray the state of the art in technology assessment and to provide conceptual options to help readers understand the power of technology Technological innovation will continue to develop its own standards of practice and effectiveness To the extent that these practices are empirically based designers supporters and consumers will be given better information for their decisions

User Models in Dialog Systems Alfred Kobsa,Wolfgang Wahlster,2012-12-06 User models have recently attracted much research interest in the field of artificial intelligence dialog systems It has become evident that flexible user oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his her background knowledge as well as his her goals and plans in consulting the system Research in the field of user models investigates how such assumptions can be automatically created represented and exploited by the system in the course of an on line interaction with the user The communication medium in this interaction need not necessarily be a

natural language such as English or German Formal interaction languages are also permit ted The emphasis is placed on systems with natural language input and output however A dozen major and several more minor user modeling systems have been de signed and implemented in the last decade mostly in the context of natural language dialog systems The goal of UM86 the first international workshop on user model ing was to bring together the researchers working on these projects so that results could be discussed and analyzed and hopefully general insights be found that could prove useful for future research The meeting took place in Maria Laach a small village some 40 miles south of Bonn West Germany 25 prominent researchers were invited to participate   **Catalogue of Artificial Intelligence Techniques** Alan Smaill,Alan Bundy,2012-12-06 The purpose of the Catalogue of Artificial Intelligence Techniques is to promote interaction between members of the AI community It does this by announcing the existence of AI techniques and acting as a pointer into the literature Thus the AI community will have access to a common extensional definition of the field which will promote a common terminology discourage the reinvention of wheels and act as a clearing house for ideas and algorithms The catalogue is a reference work providing a quick guide to the AI techniques available for different jobs It is not intended to be a textbook like the Artificial Intelligence Handbook Intentionally it only provides a brief description of each technique with no extended discussion of its historical origin or how it has been used in particular AI programs The original version of the catalogue was hastily built in 1983 as part of the UK SERC DoI IKBS Architecture Study It was adopted by the UK Alvey Programme and during the life of the programme was both circulated to Alvey grant holders in hard copy form and maintained as an on line document A version designed for the international community was published as a paperback by Springer Verlag All these versions have undergone constant revision and refinement Springer Verlag has agreed to reprint the catalogue at frequent intervals in order to keep it up to date and this is the third edition of their paperback version
    Uncertainty and Vagueness in Knowledge Based Systems Rudolf Kruse,Erhard Schwecke,Jochen Heinsohn,2012-12-06 The primary aim of this monograph is to provide a formal framework for the representation and management of uncertainty and vagueness in the field of artificial intelligence It puts particular emphasis on a thorough analysis of these phenomena and on the development of sound mathematical modeling approaches Beyond this theoretical basis the scope of the book includes also implementational aspects and a valuation of existing models and systems The fundamental ambition of this book is to show that vagueness and un certainty can be handled adequately by using measure theoretic methods The presentation of applicable knowledge representation formalisms and reasoning algorithms substantiates the claim that efficiency requirements do not necessar ily require renunciation of an uncompromising mathematical modeling These results are used to evaluate systems based on probabilistic methods as well as on non standard concepts such as certainty factors fuzzy sets or belief functions The book is intended to be self contained and addresses researchers and practioneers in the field of knowledge based systems It is in particular suit able as a textbook for graduate

level students in AI operations research and applied probability A solid mathematical background is necessary for reading this book Essential parts of the material have been the subject of courses given by the first author for students of computer science and mathematics held since 1984 at the University in Braunschweig   *AI Magazine* ,1997   *An Introduction to Default Logic* Philippe Besnard,2013-04-17 This book is written for those who are interested in a fonnalization of human reasoning especially in order to build intelligent computer systems Thus it is mainly designed for the Artificial Intelligence community both students and researchers although it can be useful for people working in related fields like cognitive psychology The major theme is not Artificial Intelligence applications although these are discussed throughout in sketch fonn Rather the book places a heavy emphasis on the fonnal development of default logic results and problems Default logic provides a fonnalism for an important part of human reasoning Default logic is specifically concerned with common sense reasoning which has recently been recognized in the Artificial Intelligence literature to be of fundamental importance for knowledge representation Previously fonnalized reasoning systems failed in real world environments though succeeding with an acceptable ratio in well defined environments This situation enabled empirical explorations and the design of systems without theoretical justification In particular they could not be compared since there was no basis to judge their respective merits Default logic turned out to be very fruitful by proving the correctness of some of them We hope that this book will initiate other successful developments in default logic   **Adaptive Semantics Visualization** Kawa Nazemi,2016-03-22 This book introduces a novel approach for intelligent visualizations that adapts the different visual variables and data processing to human s behavior and given tasks Thereby a number of new algorithms and methods are introduced to satisfy the human need of information and knowledge and enable a usable and attractive way of information acquisition Each method and algorithm is illustrated in a replicable way to enable the reproduction of the entire SemaVis system or parts of it The introduced evaluation is scientifically well designed and performed with more than enough participants to validate the benefits of the methods Beside the introduced new approaches and algorithms readers may find a sophisticated literature review in Information Visualization and Visual Analytics Semantics and information extraction and intelligent and adaptive systems This book is based on an awarded and distinguished doctoral thesis in computer science   **Text Generation and Systemic-functional Linguistics** Christian M. I. M. Matthiessen,John A. Bateman,1991 Text generation is the processing of information that is stored at a higher level than grammatical structures and lexical items such as sentences and words organizing and re expressing it so that it can appear as a worded text Of course it interests those working on artificial intelligence but it should also interest linguists as a linguistic research task   **Text Understanding in LILOG** Otthein Herzog,Claus-Rainer Rollinger,1991-09-25 The IBM project LILOG presented in this volume represents a fundamental stepbeyond computer science as hitherto understood It was a successful project in every respect and has shed light on conjectured basic interrelations between knowledge processing and language definition Knowledge processing is strongly

coupled to the natural language used and for applied knowledge processing an information base is neededwhich defines the semantic contents and interrelations of the language The LILOG project was an implementation of an information basein the German language A set of tools was also developed to work with the system including structured man machine interfaces using natural language inference algorithms and a complete subsystem to acquire and store the required knowledge The LILOG project started in 1985 and a functional system was demonstrated in 1991 The project involved approximately 200 of the scientists working in Germany in the fields of computational linguistics natural language understanding systems and artificial intelligence The project proves that a cooperative project between universities and industry can produce useful results both in pure research and in implemented methods and tools   Cahiers de Linguistique Théorique Et Appliquée ,1989   **Crash Course in Artificial Intelligence and Expert Systems** Louis E.
