Operations Research:Applications & Algorithms Winston W L,2008-01-01 **Introduction to Optimization-Based Decision-Making** Joao Luis de Miranda,2021-12-19 The large and complex challenges the world is facing the growing prevalence of huge data sets and the new and developing ways for addressing them artificial intelligence data science machine learning etc means it is increasingly vital that academics and professionals from across disciplines have a basic understanding of the mathematical underpinnings of effective optimized decision making Without it decision makers risk being overtaken by those who better

understand the models and methods that can best inform strategic and tactical decisions. Introduction to Optimization Based Decision Making provides an elementary and self-contained introduction to the basic concepts involved in making decisions in an optimization based environment. The mathematical level of the text is directed to the post secondary reader or university students in the initial years. The prerequisites are therefore minimal and necessary mathematical tools are provided as needed. This lean approach is complemented with a problem based orientation and a methodology of generalization reduction. In this way the book can be useful for students from STEM fields, economics and enterprise sciences, social sciences and humanities as well as for the general reader interested in multi-transdisciplinary approaches. Features: Collects and discusses the ideas underpinning decision making through optimization tools in a simple and straightforward manner. Suitable for an undergraduate course in optimization based decision making or as a supplementary resource for courses in operations research and management science. Self-contained coverage of traditional and more modern optimization models while not requiring a previous background in decision theory.

Service Systems Engineering and Management A. Ravi Ravindran, Paul M. Griffin, Vittaldas V. Prabhu, 2018-04-18 Recipient of the 2019 IIE Institute of Industrial and Systems Engineers Joint Publishers Book of the Year Award. This is a comprehensive textbook on service systems engineering and management. It emphasizes the use of engineering principles to the design and operation of service enterprises. Service systems engineering relies on mathematical models and methods to solve problems in the service industries. This textbook covers state-of-the-art concepts, models, and solution methods important in the design, control, operations, and management of service enterprises. Service Systems Engineering and Management begins with a basic overview of service industries and their importance in today's economy. Special challenges in managing services, namely perishability, intangibility, proximity, and simultaneity, are discussed. Quality of service metrics and methods for measuring them are then discussed. Evaluating the design and operation of service systems frequently involves the conflicting criteria of cost and customer service. This textbook presents two approaches to evaluate the performance of service systems: Multiple Criteria Decision Making and Data Envelopment Analysis. The textbook then discusses several topics in service systems engineering and management: supply chain optimization, warehousing and distribution, modern portfolio theory, revenue management, retail engineering, health systems engineering, and financial services. Features: Stresses quantitative models and methods in service systems engineering and management. Includes chapters on design and evaluation of service systems, supply chain engineering, warehousing and distribution, financial engineering, healthcare systems, retail engineering, and revenue management. Bridges theory and practice. Contains end-of-chapter problems, case studies, illustrative examples, and real-world applications. Service Systems Engineering and Management is primarily addressed to those who are interested in learning how to apply operations research models and methods for managing service enterprises. This textbook is well suited for industrial engineering students interested in service systems applications and MBA students in elective courses in
