Selected Water Resources Abstracts, 1970 **Selected Water Resources Abstracts**, 1989 **UKY Bulletin**, 1977 **Hydraulics of Open Channel Flow** Sergio Montes, 1998

This book emphasizes the dynamics of the open channel flow by attempting to provide a complete framework of the basic equation of fluid motion which is used as a building block for the treatment of many practical problems. It provides up to date coverage of modern techniques while providing a more rigorous analytical foundation for those who require it. The structure follows a logical progression from a description and classification of open channel flows through a development of the basic equations of motion for steady and unsteady flow to an analysis of varied cases of flow

Hydraulics in Civil and Environmental Engineering Andrew Chadwick, John Morfett, Martin Borthwick, 2021-06-07 This classic text now in its sixth edition combines a thorough coverage of the basic principles of civil engineering hydraulics with a wide ranging treatment of practical real world applications. It now includes a powerful online resource with worked solutions for chapter problems and solution spreadsheets for more complex problems that may be used as templates for similar issues. **Hydraulics in Civil and Environmental Engineering** is structured into two parts to deal with principles and more advanced topics. The first part focuses on fundamentals such as hydrostatics, hydrodynamics, pipe and open channel flow, wave theory, physical modelling, hydrology and sediment transport. The second part illustrates engineering applications of these principles to pipeline system design, hydraulic structures, river and coastal engineering, including up to date environmental implications as well as a chapter on computational modelling illustrating the application of computational simulation techniques to modern design in a variety of contexts. New material and additional problems for solution have been added to the chapters on hydrostatics, pipe flow and dimensional analysis. The hydrology chapter has been revised to reflect updated UK flood estimation methods, data and software. The recommendations regarding the assessment of uncertainty, climate change predictions, impacts and adaptation measures have been updated as has the guidance on the application of computational simulation techniques to river flood modelling. Andrew Chadwick is an honorary professor of coastal engineering and the former associate director of the Marine Institute at the University of Plymouth UK. John Morfett was the head of hydraulics research and taught at the University of Brighton UK. Martin Borthwick is a consultant hydrologist, formerly a flood hydrology advisor at the UK's Environment Agency and previously an associate professor at the University of Plymouth UK.
