Regulating the Metaverse Ignas Kalpokas, Julija Kalpokienė, 2023-01-26 The metaverse seems to be on everybody's lips and yet very few people can actually explain what it means or why it is important This book aims to fill the gap from an interdisciplinary perspective informed by law and media and communications studies Going beyond the optimism emanating from technology companies and venture capitalists the authors critically evaluate the antecedents and the building blocks of the metaverse the design and regulatory challenges that need to be solved and commercial opportunities that are yet to be fully realised While the metaverse is poised to open new possibilities and perspectives it will also be a dangerous place one ripe with threats ranging from disinformation to intellectual property theft to sexual harassment Hence the book offers a useful guide to the legal and political governance issues ahead while also

contextualising them within the broader domain of governance and regulation of digital technologies *The Ultimate Guide to Roblox Games* Warrior,2021 Code Review Skills for Emotionally Intelligent Developers Nina Zakharenko,2019 As teams and projects grow code review becomes increasingly important to support the maintainability of complex code bases But code reviews aren't as straightforward as they appear because the people involved in them aren't always predictable Nina Zakharenko Microsoft dives deep into guidelines for writing consistent code linting and analysis tools for various languages and common code review gotchas You'll learn about style guides and how they can help make your code more consistent and easier to maintain as well as what tools are available to help automate the review process You'll have better code reviews with your teams at work by giving code reviews with empathy using reviews as tools for sharing knowledge instead of turning the process into a competition You'll also discover a better approach to code reviews in open source projects What you'll learn Understand how to make reviews an opportunity for developers to learn from each other and encourage technical growth *Gordon's Game Reviews, Secrets, Cheat Codes, Shortcuts, Tricks, Secret Characters, and Moves* Gordon Templeton,1998-02-01 **Contemporary Peer Code Review Practices and Associated Benefits** Amiangshu Shekhar Bosu,2015 Prior research indicates that peer code review is an effective method for reducing the number of defects and improving the quality of code Besides maintaining the integrity of the code code review spreads knowledge expertise and development techniques among the review participants In the recent years many Open Source Software OSS communities and commercial organizations have adopted contemporary or modern code review an informal regular tool based process Because both OSS and commercial developers spend a significant amount of effort performing code reviews the primary goal of this dissertation is to better understand contemporary code review its non technical benefits factors that influence its outcomes and its impact on peer impression formation To address this goal this dissertation describes empirical studies using surveys software repository mining and social network analysis The first study is a survey of OSS developers to understand their collaboration and the process by which they form impressions of each other The results suggest that coding related factors influence impression formation the most among OSS developers Therefore the types of interactions where participants can judge a peer's code or creativity e.g code review should be crucial for peer impression formation The results of this study motivated the selection of peer code review as the focus of this dissertation The second study describes a survey of developers from 36 popular OSS projects and from Microsoft about 1 the code review process in their projects 2 their expectations from code review and 3 how code review impacts impressions about their peers The results suggest that the primary perceived benefit of code review is knowledge sharing relationship building better designs and ensuring maintainable code as opposed to the expected result of defect detection Code reviews help build impressions between code review participants Those impressions not only impact the code review process but also future collaborations among developers Due to the rarity of face to face interactions OSS developers rely more on the reputation of

and relationship with the author during code reviews Conversely Microsoft developers focus more on expertise and anticipated efforts Finally the third study aims to find the impact of developers reputation on the outcome of his her code review requests The results suggest that developers reputations help them receive quicker feedback on their review requests complete reviews in shorter time and get their code changes accepted Newcomers to OSS projects suffer the most due to delayed feedback which may discourage their future participation A reviewer recommendation system to triage incoming code review requests can be useful to reduce delayed feedback for newcomers Based on the results from these studies this dissertation makes recommendations for practitioners to adopt and improve code review practices

channel the available resources to address the deficiencies in their code review process To support such a claim we perform the following studies First we study the tool based code review processes of two large OSS projects that use traditional model of evaluating code contributions We analyse the software artifacts extracted from the issue tracking systems to understand what can affect code review response time and eventual outcome We found that code review is affected not only by technical factors e g patch size priority etc but also by non technical ones e g developers affiliation their experience etc Second we investigate the quality of contributions that passed the code review process and explore the relationships between the reviewers code inspections and a set of factors both personal and social in nature that might affect the quality of such inspections By mining the software repository and the issue tracking system of the Mozilla project as well as applying the SZZ algorithm to detect bug inducing changes we were able to find that 54 % of the reviewed changes introduced bugs in the code Our findings also showed that both personal metrics such as reviewer workload and experience and participation metrics such as the number of involved developers are associated with the quality of the code review process Third we further study the topic of code review quality by studying the developers attitude and perception of review quality as well as the factors they believe to be important To accomplish this we surveyed 88 Mozilla core developers and applied grounded theory to analyze their responses The results provide developer insights into how they define review quality what factors contribute to how they evaluate submitted code and what challenges they face when performing review tasks Finally we examined the code review processes executed in a completely different environment an industrial project that uses pull based development model Our case study was Active Merchant project developed by Shopify Inc We performed a quantitative analysis of their software repository to understand the effects of a variety of factors on pull request review time and outcome After that we surveyed the developers to understand their perception of the review process and how it is different from developers perception in traditional development model The studies presented in this thesis focus on code review processes performed by projects of different nature OSS vs industrial traditional vs pull based Nevertheless we observed similar patterns in the execution of code review that the stakeholder should be aware of to maintain the long term health of the projects

Supporting Modern Code Review DongGyun Han,2019 Modern code review is a lightweight and asynchronous process of auditing code changes that is done by a reviewer other than the author of the changes Code review is widely used in both open source and industrial projects because of its diverse benefits which include defect identification code improvement and knowledge transfer This thesis presents three research results on code review First we conduct a large scale developer survey The objective of the survey is to understand how developers conduct code review and what difficulties they face in the process We also reproduce the survey questions from the previous studies to broaden the base of empirical knowledge in the code review research community Second we investigate in depth the coding conventions applied during code review These coding conventions guide developers to write source code in a consistent format We determine

how many coding convention violations are introduced removed and addressed based on comments left by reviewers The results show that developers put a great deal of effort into checking for convention violations although various convention checking tools are available Third we propose a technique that automatically recommends related code review requests When a new patch is submitted for code review our technique recommends previous code review requests that contain a patch similar to the new one Developers can locate meaningful information and development context from our recommendations With two empirical studies and an automation technique for recommending related code reviews this thesis broadens the empirical knowledge base for code review practitioners and provides a useful approach that supports developers in streamlining their review efforts
