*If you're hypoglycemic, diabetic, or pregnant (and/or breastfeeding), you are better off avoiding any type of fasting or timed meal schedule until you've normalized your blood glucose and insulin levels, or weaned the baby. Other categories of people that would be best served to avoid fasting include those living with chronic stress, and those with cortisol dysregulation. Principles and Practice of Health Promotion and Public Health Sally Robinson, 2022-12-30 *Principles and Practice of Health Promotion and Public Health* brings together the disciplines and fields of study that inform the work of promoting health into one book and provides many examples of practice. It starts with understanding ourselves and our health and continues with chapters on working in health promotion and public health, epidemiology, research methods and evidence based practice, health psychology, communicating health, health education, health promotion, public health, health protection, arts and health, tackling tobacco, alcohol and drugs, tackling overweight, promoting health in workplaces and promoting health within the National Health Service. Together these communicate the core principles of how to prevent disease and promote health when working with individuals, communities and populations in any country across the world. The book focusses on adults' health and includes international and UK examples. *Principles and Practice of Health Promotion and Public Health* complements *Priorities for Health Promotion and Public Health* published in 2021.
