Why Vaccines to HIV, HCV and Malaria Have So Far Failed - Challenges to Developing Vaccines against Immunoregulating Pathogens Shuo Li, Magdalena Plebanski, Peter Smooker, Eric J. Gowans, 2016-09-14 Despite continuous progress in the development of anti viral and anti bacterial parasite drugs the high cost of medicines and the potential for re infection especially in high risk groups suggest that protective vaccines to some of the most dangerous persistent infections are still highly desirable. There are no vaccines available for HIV HCV and Malaria and all attempts to make a broadly effective vaccine have failed so far. In this Research Topic we look into why vaccines have failed over the years and what we have learned from these attempts. Rather than only showing positive results this issue aims to reflect on failed efforts in vaccine development. Coming to understand our limitations will have theoretical and practical implications for the future development of vaccines to these major global disease burdens.

[Bovine Viral Diarrhea Virus](#) Sagar M. Goyal, Julia F. Ridpath, 2008-02-28

For almost 60 years continual research on the subject of Bovine Viral Diarrhea BVD has raised as many questions as that research has answered. This common disease continues to cause sickness death abortion and fetal anomalies despite the millions of vaccination doses used each year to prevent its spread. Written by international experts on the subject of the BVD virus BVDV Diagnosis Management and Control includes the latest information on BVD and outlines methods of diagnosis management and control. Researchers academics and large animal practitioners will find this book an invaluable and irreplaceable resource for understanding and controlling outbreaks of BVD.

Vaccines against RNA Viruses Juan Carlos Saiz, 2020-12-28

RNA viruses cause animal human and zoonotic diseases that affect millions of individuals as is being exemplified by the devastating ongoing epidemic of the recently identified SARS Cov 2. For years vaccines have had an enormous impact on overcoming the global burden of diseases. Nowadays a vast number of different approaches from purified inactivated and live attenuated viruses nucleic acid DNA or RNA based candidates virus like particles subunit elements and recombinant viruses are been employed to combat viruses. However for many of them efficient vaccines are not yet available. This will probably change dramatically with the current Covid 19 pandemic as a vast variety of vaccinology approaches are being tested against it with hundreds of candidates under development dozens of them already in clinical trials a fact that is breaking records in vaccine development and implementation. This is becoming possible thanks to the enormous work carried out during years to have the bases for a quick response even against unknown pathogens in an impressive short time. Here results obtained with different vaccine s methodological approaches against human HIV HCV HRV animal PRRSV PEDV FMDV VHSV and zoonotic RVF WNV RNA viruses are presented by field experts.
