*Technology, Policy, Law, and Ethics Regarding U.S. Acquisition and Use of Cyberattack Capabilities* National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Offensive Information Warfare, 2009-11-27 The United States is increasingly dependent on information and information technology for both civilian and military purposes as are many other nations. Although there is a substantial literature on the potential impact of a cyberattack on the societal infrastructure of the United States, little has been written about the use of cyberattack as an instrument of U.S. policy. Cyberattacks intended to damage adversary computer systems or networks can be used for a variety of military purposes. But they also have application to certain missions of the intelligence community such as covert action. They may be useful for certain domestic law enforcement purposes and some analysts believe that they might be useful for certain private sector entities who are themselves under cyberattack. This report considers all of these applications from an integrated perspective that ties together technology, policy, legal and ethical issues. Focusing on the use of cyberattack as an instrument of U.S. national policy, *Technology, Policy, Law, and Ethics Regarding U.S. Acquisition and Use of Cyberattack Capabilities* explores important characteristics of cyberattack. It describes the current international and domestic legal structure as it might apply to cyberattack and considers analogies to other domains of conflict to develop relevant insights. Of special interest to the military, intelligence, law enforcement and homeland security communities, this report is also an essential point of departure for nongovernmental researchers interested in this rarely discussed topic.
