

ing accessories in your model railroad system. The larger the train and the greater the number of accessories, the more power you need and the higher should be the wattage rating of the transformer. The Lionel catalog states the wattage of the transformer recommended for each outfit. To assist you in further planning your railroad system, the Instruction Booklet lists the power in watts required by each Lionel locomotive and accessory.

MULTI-CONTROL TRANSFORMERS

"VW" and "ZW" Transformers have been given the name of "Multi-Control" transformers. This means that all the controls necessary for operating your locomotive and whistle are built into the transformer itself.

The "VW" and "ZW" Transformers are so designed that two trains can be operated and controlled independently of each other without any additional equipment. A method for operating two or more trains will be described later. On each end of the transformer there is a long throttle-type lever. This is the speed control. By moving this throttle you can regulate the voltage supplied to the track so that the train can be gradually accelerated or retarded in a realistic fashion. The left-hand throttle controls the voltage supplied by the output binding posts labeled "A-U", while the right-hand throttle controls the pair labeled "D-U".

Next to each of the throttles you will find a short lever. This is a combination whistle and reversing control for that circuit. Moving the lever away from you, toward the side marked "Whistle", blows the train whistle. Moving the lever toward you, to the side marked "Direction", stops, starts and reverses the locomotive. A separate whistle and reverse lever is provided for each of the two throttle-controlled train circuits so that if you operate two trains on separate sections of your model railroad you can sound each whistle separately and start and stop each locomotive without interfering with the action of the other. Naturally, if you have only one train you will use only one of the throttles and only the whistle and direction controller next to it.

CONNECTING TRANSFORMER TO TRACK

"VW" and "ZW" Multi-Control Transformers have four pairs of binding posts located on the rear wall of the transformer case. Each pair of these posts provides a separate power source which can be controlled independently of
