**Handbook of College Science Teaching** Joel J. Mintzes,2006 The Handbook offers models of teaching and learning that go beyond the typical lecture laboratory format and provides rationales for new practices in the college classroom It is ideal for graduate teaching assistants senior faculty and graduate coordinators and mid career professors in search of reinvigoration

**Active Learning in College Science** Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take

Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4 year liberal arts institutions, comprehensive regional campuses and flagship research universities. In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory, Section I the practices we explore are Eliciting Ideas and Encouraging Reflection; Section II Using Clickers to Engage Students; Section III Supporting Peer Interaction through Small Group Activities; Section IV Restructuring Curriculum and Instruction; Section V Rethinking the Physical Environment; Section VI Enhancing Understanding with Technology; Section VII and Assessing Understanding; Section VIII. The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students that knowledge base is riddled with a host of naïve notions, misconceptions and alternative conceptions they have acquired throughout their lives. To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly this prescription demands far more than most college and university scientists have been prepared for. [Astronomy Media Workbook](#) Michael C. LoPresto, Jeffrey O. Bennett, 2007. This revised and expanded popular media workbook is provided with all new copies of Bennett's book and includes a wide selection of in depth activities using resources from The Astronomy Place and Voyager SkyGazer College Edition v3.6 planetarium software. These thought provoking projects are suitable for the lab or as assignable homework assignments. [Astrobiology](#) Octavio A. Chon Torres, Ted Peters, Joseph Seckbach, Richard Gordon, 2021-10-12. ASTROBIOLOGY. This unique book advances the frontier discussion of a wide spectrum of astrobiological issues on scientific advances, space ethics, social impact, religious meaning and public policy formulation. Astrobiology is an exploding discipline in which not only the natural sciences but also the social sciences and humanities converge. Astrobiology Science, Ethics and Public Policy is a multidisciplinary book that

presents different perspectives and points of view by its contributing specialists Epistemological moral and political issues arising from astrobiology convey the complexity of challenges posed by the search for life elsewhere in the universe We ask if a convoy of colonists from Earth make the trip to Mars should their genomes be edited to adapt to the Red Planet s environment If scientists discover a biosphere with microbial life within our solar system will it possess intrinsic value or merely utilitarian value If astronomers discover an intelligent civilization on an exoplanet elsewhere in the Milky Way what would be humanity s moral responsibility to protect Earth from an existential threat To treat other intelligences with dignity To exploit through interstellar commerce To conquer Audience The book will attract readers from a wide range of interests including astronomers astrobiologists chemists biologists space engineers ethicists theologians and philosophers

*Astronomy Media Workbook for The Cosmic Perspective, The Essential Cosmic Perspective* Michael C. LoPresto,2005 Book includes CD and Student Access Kit for the Astronomy Place     The Victorian Amateur Astronomer Allan Chapman,1998 This is the first book to look in detail at amateur astronomy in Victorian Britain It deals with the technical issues that were active in Victorian astronomy and reviews the problems of finance patronage and the dissemination of scientific ideas It also examines the relationship between the amateur and professional in Britain It contains a wealth of previously unpublished biographical and anecdotal material and an extended bibliography with notes incorporating much new scholarship In The Victorian Amateur Astronomer Allan Chapman shows that while on the continent astronomical research was lavishly supported by the state in Britain such research was paid for out of the pockets of highly educated wealthy gentlemen the so called Grand Amateurs It was these powerful individuals who commissioned the telescopes built the observatories ran the learned societies and often stole discoveries from their state employed colleagues abroad In addition to the Grand Amateurs Victorian Britain also contained many self taught amateurs Although they belonged to no learned societies these people provide a barometer of the popularity of astronomy in that age In the late 19th century the comfortable middle classes clergymen lawyers physicians and retired military officers took to astronomy as a serious hobby They formed societies which focused on observation lectures and discussions and it was through this medium that women first came to play a significant role in British astronomy Readership Undergraduate and postgraduate students studying the history of science or humanities professional historians of science engineering and technology particularly those with an interest in astronomy the development of astronomical ideas scientific instrument makers and amateur astronomers
