Creativity for Innovation Management Ina Goller, John Bessant, 2023-07-28 Creativity for Innovation Management is a rigorous yet applied guide which illustrates what creativity is, why it matters, and how it can be developed at both individual and group levels. Unlike many technique-oriented books, this book combines theory with practice, drawing on the latest research in psychology, organisational behaviour, innovation, and entrepreneurship. The text provides a range of opportunities to explore innovative and creative processes and develop them via activities linked to relevant tools and techniques, as well as real-life case studies. By working through key competence areas at personal and then team levels, the book demonstrates to students how to build entrepreneurial practices, strong innovative teams, and organisations that encourage and facilitate innovative thinking. This second edition has been updated throughout, including a new chapter exploring the impact of emerging technologies on creativity, further material on human-centred design, crowdsourcing, and collaboration platforms, and cross-cultural differences in innovation management. This textbook is ideal for postgraduate students of Innovation and Creativity and Entrepreneurship, as well as professionals who want to excel by developing and applying their own creativity at work. Online resources complement the book with access to key tools, techniques, and activities, as well as supporting video and audio material, and cases to support learning and teaching.

Autonomous Vehicles and Civil Liability in a Global Perspective Hans Steege, Ilaria Amelia Caggiano, Maria Cristina Gaeta, Benjamin von Bodungen, 2024-04-30 In the automotive sector, digitalisation, connectivity, and automation are rapidly expanding. In tomorrow's vehicles, human beings will merely be passengers, which raises a host of complex legal issues regarding accidents involving self-driving vehicles. This book is the first to offer a comprehensive global overview of civil liability regimes for all levels of vehicle automation in jurisdictions that represent some of the most important markets for the automotive industry. After a technical introduction to how self-driving cars work, the individual chapters analyse the liability
