#### More on Elastic Energy – Introduction

In a previous lesson, you explored contact push/pull interactions that involve at least one object that is elastic; that is, it is stretchy or springy in some manner. You also learned about a type of energy associated with elastic objects that is called elastic potential energy (EPE). An object's elastic potential energy increases when it is more stretched (or more compressed), and decreases when it is less stretched (or less compressed).

For example, recall the interaction between the cart and the rubber band. When the cart is launched into the rubber band and slows down, it stretches the rubber band and the EPE of the rubber band increases. When the rubber band "snaps back" and relaunches the cart, the EPE of the rubber band decreases.
