## Networks and Graphs: Spanning Trees

### VII.B Student Activity Sheet 7: Minimal Spanning Trees

A railroad system connecting five cities is being planned. The goal is to build this system using the least amount of money, while ensuring that each city can be reached by any other city in the system. Based on the distance and terrain, the following chart gives estimates for the cost, in hundreds of thousands of dollars, to build a railroad between any two cities.

	City A	City B	City C	City D	City E
City A		10	5	4	2
City B			7	9	11
City C				5	10
City D					12

1. Create a graph to model the costs contained in the table.
2. Restate the railroad problem using the terminology associated with graphs (for example, vertices, edges, paths, cycles).
3. Construct two different graphs that represent possible railroad networks, and calculate the total cost to build each rail system.
4. What rail system leads to the lowest construction cost?
5. How did you arrive at the most efficient rail system? State your answer in a step-by-step algorithm that someone else could follow.

**Graph Theory** Bela Bollobas,2012-12-06 From the reviews B la Bollob s introductory course on graph theory deserves to be considered as a watershed in the development of this theory as a serious academic subject The book has chapters on electrical networks flows connectivity and matchings extremal problems colouring Ramsey theory random graphs and graphs and groups Each chapter starts at a measured and gentle pace Classical results are proved and new insight is provided with the examples at the end of each chapter fully supplementing the text Even so this allows an introduction not only to some of the deeper results but more vitally provides outlines of and firm insights into their proofs Thus in an elementary text book we gain an overall understanding of well known standard results and yet at the same time constant hints of and guidelines into the higher levels of the subject It is this aspect of the book which should guarantee it a permanent place in the literature
