**Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds** Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds. Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism. Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades.

**Pacing** Kevin Thompson, We've all heard the advice Pace yourself Save energy and finish strong. It sounds simple enough so why is it so hard? Why do even supremely conditioned elite athletes mismanage their energy supplies and fail to finish strong? Pacing Individual Strategies for Optimal Performance examines the latest science research and application in search of answers. This guide explores the role of pacing in sports the most common strategies used the factors that influence effectiveness and key considerations for today's athletes and coaches. You'll also discover these aspects: How environmental variables such as temperature and terrain can affect performance. How to choose the best pacing strategy for any event. How to use pacing to defeat an opponent. The role the brain plays in pacing strategies. Part I explains the biological and psychological underpinnings of pacing science including the six commonly used pacing strategies that are discussed in detail throughout the book all out positive even negative parabolic and variable. Part II shows how to apply the science offering pacing recommendations and considerations for time dependent sports such as running triathlon and swimming and exploring the role of pacing in racket sports and several team sports. Combining scientific research and real world profiles of elite athletes and coaches Pacing Individual Strategies for Optimal Performance shows coaches and athletes how to develop the ideal pacing plan for every competition.
