principle Sustainable Water and Environmental Management in the California Bay-Delta National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Water Science and Technology Board, Committee on Sustainable Water and Environmental Management in the California Bay-Delta, 2012-10-01 Extensively modified over the last century and a half California's San Francisco Bay Delta Estuary remains biologically diverse and functions as a central element in California's water supply system. Uncertainties about the future actions taken under the federal Endangered Species Act ESA and companion California statutes and lawsuits have led to conflict concerning the timing and amount of water that can be diverted from the Delta for agriculture, municipal and industrial purposes and concerning how much water is needed to protect the Delta ecosystem and its component species. Sustainable Water and Environmental Management in the California Bay Delta focuses on scientific questions, assumptions and conclusions underlying water management alternatives and reviews the initial public draft of the Bay Delta Conservation Plan in terms of adequacy of its use of science and adaptive management. In addition, this report identifies the factors that may be contributing to the decline of federally listed species, recommends future water supply and delivery options that reflect proper consideration of climate change and compatibility with objectives of maintaining a sustainable Bay Delta ecosystem, advises what degree of restoration of the Delta system is likely to be attainable and provides metrics that can be used by resource managers to measure progress toward restoration goals.
