Neural Network Design Electrical Engineering:

Neural Network Design (2nd Edition) Martin Hagan, Howard Demuth, Mark Beale, Orlando De Jesus, 2014-09-01 This book provides a clear and detailed coverage of fundamental neural network architectures and learning rules. In it the authors emphasize a coherent presentation of the principal neural networks methods for training them and their applications to practical problems

Artificial Intelligence in Theory and Practice II Max Bramer, 2010-08-17 The papers in this volume comprise the refereed proceedings of the conference Artificial Intelligence in Theory and Practice IFIP AI 2008 which formed part of the 20th World Computer Congress of IFIP the International Federation for Information Processing WCC 2008 in Milan Italy in September 2008. The conference is organised by the IFIP Technical Committee on Artificial Intelligence Technical Committee 12 and its Working Group 12.5 Artificial Intelligence Applications All papers were reviewed by at least two members of our Program Committee. Final decisions were made by the Executive Program Committee which comprised John Debenham University of Technology Sydney Australia Ilias Maglogiannis University of Aegean Samos Greece Eunika Mercier Laurent KIM France and myself. The best papers were selected for the conference either as long papers maximum 10 pages or as short papers maximum 5 pages and are included in this volume. The international nature of IFIP is amply reflected in the large number of countries represented here. The conference also featured invited talks by Prof Nikola Kasabov Auckland University of Technology New Zealand and Prof Lorenza Saitta University of Piemonte Orientale Italy I should like to thank the conference chair John Debenham for all his efforts and the members of our program committee for reviewing papers to a very tight deadline

Analog VLSI Neural Networks Yoshiyasu Takefuji, 2012-12-06 This book brings together in one place important contributions and state of the art research in the rapidly advancing area of analog VLSI neural networks. The book serves as an excellent reference providing insights into some of the most important issues in analog VLSI neural networks research efforts

Artificial Neural Nets and Genetic Algorithms David W. Pearson, Nigel C. Steele, Rudolf F. Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes. By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields. This diversity is reflected in the topics which are subjects of the contributions to this volume. There are contributions reporting successful applications of the technology to the solution of industrial commercial problems. This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm. Theoretical issues also receive attention notably in connection with the radial basis function neural network. Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers. These techniques are also used extensively for combinatorial optimisation

problems **Neural Networks In Design And Manufacturing** Yoshiyasu Takefuji,Jun Wang,1993-10-29 Over the past few years there has been a surge of research activities on artificial neural networks Although the thrust originally came from computer scientists and electrical engineers neural network research has recently attracted researchers in the fields of operations research operations management and industrial engineering Despite the huge volume of recent publications devoted to neural network research there is no single monograph addressing the potential roles of artificial neural networks for design and manufacturing The focus of this book is on the applications of neural network concepts and techniques to design and manufacturing This book reviews the state of the art of the research activities highlights the recent advances in research and development and discusses the potential directions and future trends along this stream of research The potential readers of this book will include but are not limited to beginners professionals and practitioners in industries who are applying neural networks to design and manufacturing The topics include conceptual design group technology process planning and scheduling process monitoring and others

New Trends in Neural Computation José Mira,Joan Cabestany,Alberto Prieto,1993-05-27 Neural computation arises from the capacity of nervous tissue to process information and accumulate knowledge in an intelligent manner Conventional computational machines have encountered enormous difficulties in duplicatingsuch functionalities This has given rise to the development of Artificial Neural Networks where computation is distributed over a great number of local processing elements with a high degree of connectivityand in which external programming is replaced with supervised and unsupervised learning The papers presented in this volume are carefully reviewed versions of the talks delivered at the International Workshop on Artificial Neural Networks IWANN 93 organized by the Universities of Catalonia and the Spanish Open University at Madrid and held at Barcelona Spain in June 1993 The 111 papers are organized in seven sections biological perspectives mathematical models learning self organizing networks neural software hardware implementation and applications in five subsections signal processing and pattern recognition communications artificial vision control and robotics and other applications

Efficient

Processing of Deep Neural Networks Vivienne Sze, Yu-Hsin Chen, Tien-Ju Yang, 2020-06-24 This book provides a structured treatment of the key principles and techniques for enabling efficient processing of deep neural networks DNNs. DNNs are currently widely used for many artificial intelligence AI applications including computer vision, speech recognition and robotics. While DNNs deliver state of the art accuracy on many AI tasks, it comes at the cost of high computational complexity. Therefore, techniques that enable efficient processing of deep neural networks to improve key metrics such as energy efficiency, throughput and latency without sacrificing accuracy or increasing hardware costs are critical to enabling the wide deployment of DNNs in AI systems. The book includes background on DNN processing, a description and taxonomy of hardware architectural approaches for designing DNN accelerators, key metrics for evaluating and comparing different designs, features of DNN processing that are amenable to hardware algorithm co-design to improve energy efficiency and throughput, and opportunities for applying new technologies. Readers will find a structured introduction to the field as well as formalization and organization of key concepts from contemporary work that provide insights that may spark new ideas.

The authors describe synergistic design approaches on the application, algorithmic, computer architecture and circuit level that will help in achieving the goal of reducing the computational cost of deep learning algorithms. The impact of these techniques is displayed in four silicon prototypes for embedded deep learning. Gives a wide overview of a series of effective solutions for energy efficient neural networks on battery constrained wearable devices. Discusses the optimization of neural networks for embedded deployment on all levels of the design hierarchy: applications, algorithms, hardware architectures and circuits supported by real silicon prototypes. Elaborates on how to design efficient Convolutional Neural Network processors exploiting parallelism and data reuse, sparse operations and low precision computations. Supports the introduced theory and design concepts by four real silicon prototypes. The physical realization, implementation and achieved performances are discussed elaborately to illustrate and highlight the introduced cross layer design concepts. **日本機械学会** (Japan), 1990 **The 1997 IEEE International Conference on Neural Networks, June 9-12, 1997, Westin Galleria Hotel, Houston, Texas, USA.**, 1997 Artificial Neural Nets and Genetic Algorithms, 1995 **1993 IEEE International Conference on Neural Networks, San Francisco, California, March 28-April 1, 1993**, 1993 **Journal of Information Science and Engineering**, 2002
