Passivity Modeling Continuous Biological Reactors:

Passivity Based Modeling and Control of Continuous Biological Reactors Mohit Makkar,2015-12-24 This work proposes a passivity based formulation and control of a well mixed reactor model for a set of chemical and biochemical reactions Gibbs free energy is an apt Hamiltonian function for isothermal cases An energy based model of such systems is proposed which is quasi Port Hamiltonian based on physical grounds The model is taking care of the concentration space and reaction space of a chemical reaction Stoichiometric and Reaction interconnection and damping assignment passivity based controllers IDA PBC are derived from these models Control of enzymatic hydrolysis of cellulose in continuous reactor is simulated A passivity based model of a general set of microbial reactions in open reactors with new Lyapunov functions is derived A change of coordinates simplifies the number of equations to be taken care of and shows the passivity of the system The Lyapunov functions are in close proximity with the Gibbs free energy function used in Port Hamiltonian model of enzymatic reactions A general method of generating an adaptive passivity based control law which maintains the structure of the model is given Validation of the model is done on multiple reaction examples

Biological Metal Recovery from Wastewaters Sabrina Hedrich,Oliver Wicke,2025-01-28 This book reviews the latest research on innovative and sustainable biotechnologies for metal recovery from various process streams emphasising the fundamentals and applications of biosystems Divided into 7 chapters it clarifies many topics including biological iron and aluminum recovery from wastewaters precious metal recovery Pt Pd Au Ag algal based metal recovery selenium and tellurium recovery phytoextraction options and arsenic removal by sulfate reducing bacteria Expert contributors explore microbial metabolisms such as iron oxidation sulfate sulfur reduction and selenite reduction through the lens of environmental sustainability In this book readers will discover various case studies and commercial applications of these biotechnologies Particular attention is given to combinations of biological systems with electrochemistry to enhance metal recycling from complex and diluted streams This book is a valuable resource for researchers in the field of environmental biotechnology and scholars of environmental science chemical engineering and microbiology Waste management and resource recovery professionals will benefit greatly from the insights provided This book is a must read for anyone interested in sustainable solutions for critical metal supply within a circular economy framework

Energy/environment ,1977 **Water Treatment Unit Processes** David W. Hendricks,2018-10-03 The unit process approach common in the field of chemical engineering was introduced about 1962 to the field of environmental engineering An understanding of unit processes is the foundation for continued learning and for designing treatment systems The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering Suitable for a two semester course Water Treatment Unit Processes Physical and Chemical provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice Bridging the gap between scientific principles and engineering practice the book covers approaches that are common to all

unit processes as well as principles that characterize each unit process Integrating theory into algorithms for practice Professor Hendricks emphasizes the fundamentals using simple explanations and avoiding models that are too complex mathematically allowing students to assimilate principles without getting sidelined by excess calculations Applications of unit processes principles are illustrated by example problems in each chapter Student problems are provided at the end of each chapter the solutions manual can be downloaded from the CRC Press Web site Excel spreadsheets are integrated into the text as tables designated by a CD prefix Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables The spreadsheets can be downloaded from the CRC web site The book has been designed so that each unit process topic is self contained with sidebars and examples throughout the text Each chapter has subheadings so that students can scan the pages and identify important topics with little effort Problems references and a glossary are found at the end of each chapter Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information Appendices at the end of the book provide useful reference material on various topics that support the text This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems **Energy Research Abstracts**, 1979 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e g Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes **Chemical Reactor Theory** Richard Herman Wilhelm,1977 **Spirit of Enterprise** David W.
