 vast lava plains on the side facing Earth But why would the two side of the moon be so different And what might this tell us  
 about our own place in the universe As it turns out quite a lot Fourteen billion years ago the universe exploded into being  
 creating galaxies and stars Planets formed out of the leftover dust and gas that coalesced into larger and larger bodies  
 orbiting around each star In a sort of heavenly survival of the fittest planetary bodies smashed into each other until solar
