Enabling Technologies for Effective Planning and Management in Sustainable Smart Cities

Mohd Abdul Ahad, Gabriella Casalino, Bharat Bhushan, 2023-03-01 With the rapid penetration of technology in varied application domains the existing cities are getting connected more seamlessly. Cities become smart by inducing ICT in the classical city infrastructure for its management. According to McKenzie Report about 68% of the world population will migrate towards urban settlements in near future. This migration is largely because of the improved Quality of Life (QoL) and livelihood in urban settlements. In the light of urbanization, climate change, democratic flaws, and rising urban welfare expenditures, smart cities have emerged as an important approach for society's future development. Smart cities have achieved enhanced QoL by giving smart information to people regarding healthcare, transportation, smart parking, smart traffic structure, smart home, smart agronomy, community security, etc. Typically, in smart cities, data is sensed by the sensor devices and provided to end users for further use. The sensitive data is transferred with the help of the internet, creating higher chances for the adversaries to breach the data. Considering the privacy and security as the area of prime focus, this book covers the most prominent security vulnerabilities associated with varied application areas like healthcare, manufacturing, transportation, education, and agriculture, etc. Furthermore, the massive amount of data being generated through ubiquitous sensors placed across the smart cities needs to be handled in an effective, efficient, secured, and privacy-preserved manner. Since a typical smart city ecosystem is data-driven, it is imperative to manage this data in an optimal manner. Enabling technologies like Internet of Things (IoT), Natural Language Processing (NLP), Blockchain Technology, Deep Learning, Machine Learning, Computer vision, Big Data Analytics, Next Generation Networks, and Software Defined Networks (SDN) provide exemplary benefits if they are integrated in the classical city ecosystem in an effective manner. The application of Artificial Intelligence (AI) is expanding across many domains in the smart city, such as infrastructure, transportation, environmental protection, power and energy, privacy, and security governance, data management, healthcare, and more. AI has the potential to improve human health, prosperity, and happiness by reducing our reliance on manual labor and accelerating our progress in the sciences and technologies. NLP is an extensive domain of AI and is used in collaboration with machine learning and deep learning algorithms for clinical informatics and data processing. In modern smart cities, blockchain provides a complete framework that controls the city operations and ensures that they are managed as effectively as possible. Besides having an impact on our daily lives, it also facilitates many areas of city management.

Women in Psychiatry 2023: Perinatal Psychiatry

Soudabeh Givrad, Alison Hermann, Laura Orsolini, 2024-10-21 At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields and STEM research, in particular. Science and gender equality are, however, essential to ensure sustainable development as highlighted by UNESCO. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and

women should be encouraged to pursue STEM careers Therefore Frontiers in Psychiatry is proud to offer this platform to promote the work of women scientists across all fields of Psychiatry The work presented here highlights the diversity of research performed across the entire breadth of Psychiatry research and presents advances in theory experiment and methodology with applications to compelling problems Encyclopedia of Business Analytics and Optimization Wang, John,2014-02-28 As the age of Big Data emerges it becomes necessary to take the five dimensions of Big Data volume variety velocity volatility and veracity and focus these dimensions towards one critical emphasis value The Encyclopedia of Business Analytics and Optimization confronts the challenges of information retrieval in the age of Big Data by exploring recent advances in the areas of knowledge management data visualization interdisciplinary communication and others Through its critical approach and practical application this book will be a must have reference for any professional leader analyst or manager interested in making the most of the knowledge resources at their disposal Computer Architecture John L.
