ENTERING EXCEL FORMULAE AND FORMATTING DATA

Lesson 1 familiarized you with the Excel window, taught you how to move around the window, and how to enter data. A major strength of Excel is that you can perform mathematical calculations and format your data. In this lesson, you learn how to perform basic mathematical calculations and how to format text and numerical data. To start this lesson, open Excel.

Set the Enter Key Direction

In Microsoft Excel, you can specify the direction the cursor moves when you press the Enter key. In the exercises that follow, the cursor must move down one cell when you press Enter. You can use the Direction box in the Excel Options pane to set the cursor to move up, down, left, right, or not at all. Perform the steps that follow to set the cursor to move down when you press the Enter key:

- Click the Microsoft Office button. A menu appears.
- Click Excel Options in the lower-right corner. The Excel Options pane appears.
- Click Advanced.
- If the check box next to After Pressing Enter Move Selection is not checked, click the box to check it.
- If Down does not appear in the Direction box, click the down arrow next to the Direction box and then click Down.
- Click OK. Excel sets the Enter direction to down.

Perform Mathematical Calculations

In Microsoft Excel, you can enter numbers and mathematical formulas into cells. Whether you enter a number or a formula, you can reference the cell when you perform mathematical calculations such as addition, subtraction, multiplication, or division.
