Microbial Processes And Products Methods In Biotechnology:

Microbial Processes and Products José-Luis Barredo, 2008-02-05 The development of biotechnology over the last 20 years and particularly the use of recombinant DNA techniques has rapidly expanded the opportunities for human benefits from living resources. Efforts to reduce pollution prevent environmental damage, combat microbial infection, improve food production, and so on can each involve fermentation or the environmental use of microorganisms. Many products of fermentation technology such as alcoholic beverages, bread, antibiotics, amino acids, vitamins, enzymes, and others have been influenced by the progress of recombinant DNA techniques. The development of new products or the more efficient manufacturing of those already being produced often involve the use of microorganisms as cell factories for many productions and biotransformations. Microbial Processes and Products is intended to provide practical experimental laboratory procedures for a wide range of processes and products mediated by microorganisms. Although not an exhaustive treatise, it provides a detailed step-by-step description of the most recent developments in such applied biotechnological processes. The detailed protocols we provide are cross-referenced in the Notes section, contain critical details, lists of problems and their troubleshooting, as well as safety recommendations that may not normally appear in journal articles and can be particularly useful for those unfamiliar with specific techniques.

Food Biotechnology: Principles and Practices Vinod K. Joshi, R.S. Singh, 2012-03-10 This book covers the course of Food Biotechnology adopted by various universities. The book is primarily meant for undergraduate and postgraduate classes as a Reference cum Textbook. It would be very useful both from teaching and research point of view. All the chapters in the book are contributed by the experts in their respective fields of research. These are intended to equip the readers with the basics and applied research in food biotechnology. To make concepts more clear, the contents have been divided into following sections. The aim is to develop an authentic account of biotechnology in the food industry and stimulate research in food biotechnology. Unlike the past, the present food industry is profitably deriving benefits from bioengineering. These applied aspects are covered so that the students could take relevant assignments in the food industry. It also highlights future needs of research on the various aspects of food biotechnology. The book includes topics like biosensors, biocolours, biopreservatives, probiotics, genetically modified foods, and microbial flavours. The book addresses various disciplines of food microbiology, food biotechnology, food engineering, and postharvest technology.

Removal of Emerging Contaminants Through Microbial Processes Maulin P Shah, 2020-10-14 The abundance of organic pollutants found in wastewater affect urban surface waters Traditional wastewater management technologies focus on the removal of suspended solids nutrients and bacteria however new pollutants such as synthetic or naturally occurring chemicals are often not monitored in the environment despite having the potential to enter the environment and cause adverse ecological and human health effects Collectively referred to as emerging contaminants they are mostly derived from domestic activities and occur in trace concentrations ranging from pico to micrograms per liter Environmental contaminants are resistant to conventional wastewater treatment processes and most of them remain unaffected causing contamination of receiving water This in turn leads to the need for advanced wastewater treatment processes capable of removing environmental contaminants to ensure safe fresh water sources This book provides an up to date overview of the current bioremediation strategies including their limitations challenges and their potential application to remove environmental pollutants It also introduces the latest trends and advances in environmental bioremediation and presents the state of the art in biological and chemical wastewater treatment processes As such it will appeal to researchers and policy makers as well as undergraduate and graduate environmental sciences students
