The Theory and Practice of Conformal Geometry Steven G. Krantz, 2016-02-17 An expert on conformal geometry introduces some of the subject's modern developments Topics include the Riemann mapping theorem invariant metrics automorphism groups harmonic measure extremal length analytic capacity invariant geometry and more 2016 edition

Conformal Maps And Geometry Dmitry Beliaev, 2019-11-19 I very much enjoyed reading this book Each chapter comes with well thought out exercises solutions to which are given at the end of the chapter Conformal Maps and Geometry presents key topics in geometric function theory and the theory of univalent functions and also prepares the reader to progress to study the SLE It succeeds admirably on both counts MathSciNet Geometric function theory is one of the most interesting parts of complex analysis an area that has become increasingly relevant as a key feature in the theory of Schramm Loewner evolution Though Riemann mapping theorem is frequently explored there are few texts that discuss general theory of univalent maps conformal invariants and Loewner evolution This textbook provides an accessible foundation of the theory of conformal maps and their connections with geometry It offers a unique view of the field as it is one of the first to discuss general theory of univalent maps at a graduate level while introducing more complex theories of conformal invariants and extremal lengths Conformal Maps and Geometry is an ideal resource for graduate courses in Complex Analysis or as an analytic prerequisite to study the theory of Schramm Loewner evolution **Conformal**

Geometry of Surfaces in S^4 and Quaternions Francis E. Burstall, 2002-03-05 The conformal geometry of surfaces recently developed by the authors leads to a unified understanding of algebraic curve theory and the geometry of surfaces on the basis of a quaternionic valued function theory The book offers an elementary introduction to the subject but takes the reader to rather advanced topics Willmore surfaces in the four sphere their Bäcklund and Darboux transforms are covered and a new proof of the classification of Willmore spheres is given **Conformal Geometry** Miao Jin, Xianfeng Gu, Ying He, Yalin

Wang, 2018-04-10 This book offers an essential overview of computational conformal geometry applied to fundamental problems in specific engineering fields It introduces readers to conformal geometry theory and discusses implementation issues from an engineering perspective The respective chapters explore fundamental problems in specific fields of application and detail how computational conformal geometric methods can be used to solve them in a theoretically elegant and computationally efficient way The fields covered include computer graphics computer vision geometric modeling medical imaging and wireless sensor networks Each chapter concludes with a summary of the material covered and suggestions for further reading and numerous illustrations and computational algorithms complement the text The book draws on courses given by the authors at the University of Louisiana at Lafayette the State University of New York at Stony Brook and Tsinghua University and will be of interest to senior undergraduates graduates and researchers in computer science applied mathematics and engineering Conformal Geometry, Representation Theory and Linear Fields Tammo Diemer, 1999

Computational Conformal Geometry Shing-Tung Yau, **Conformal Geometry and Quasiregular Mappings** Matti Vuorinen, 2014-01-15 Recent Progress in Conformal Geometry Abbas Bahri, Yongzhong Xu, 2007 This book presents a new front of research in conformal geometry on sign changing Yamabe type problems and contact form geometry in particular New ground is broken with the establishment of a Morse lemma at infinity for sign changing Yamabe type problems This family of problems thought to be out of reach a few years ago becomes a family of problems which can be studied the book lays the foundation for a program of research in this direction In contact form geometry a cousin of symplectic geometry the authors prove a fundamental result of compactness in a variational problem on Legendrian curves which allows one to define a homology associated to a contact structure and a vector field of its kernel on a three dimensional manifold The homology is invariant under deformation of the contact form and can be read on a sub Morse complex of the Morse complex of the variational problem built with the periodic orbits of the Reeb vector field This book introduces therefore a practical tool in the field and this homology becomes computable Conformal Geometry of Surfaces in S^4 and Quaternions, 2000
