of unmeasured heterogeneity that could confound productivity comparisons in more aggregate data and in broader samples. The three main results of this study highlight how the adoption of new IT enhanced machinery involves much more than just the installation of new equipment on the factory floor. We find that adoption of new IT enhanced equipment 1 alters business strategies moving valve manufacturers away from commodity production based on long production runs to customized production in smaller batches 2 improves the efficiency of all stages of the production process with reductions in setup times supporting the change in business strategy and 3 increases the skill requirements of workers while promoting the adoption of new human resource practices.
