

Intermittent Fasting

Stage 1: Right After Eating

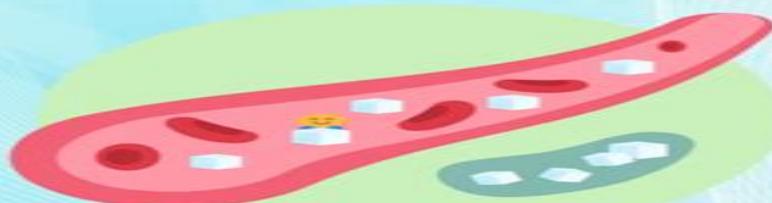

- Carbohydrates from food are converted into glucose (sugar) and released into the bloodstream.
- Blood sugar level rises.
- Insulin stimulates the conversion of glucose into glycogen as energy storage.

Stage 2: 3 Hours After Eating

3 Hours After Eating

- While insulin works, blood sugar level drops.
- In a non-fasting state, glycogen is used as energy.
- Excess glycogen that is not used is stored in the body as fats.

Stage 3: 9 Hours After Eating

- As blood sugar levels continue to drop, the body reacts by converting glycogen back into glucose and releasing it into the bloodstream.
- Fat is not yet used as an energy source, as there is still glucose and glycogen available.

Stage 4: 11 Hours After Eating

- Now that the stored glycogen has been almost used up, a metabolic switch is flipped.
- Fat is burned as it is used as energy.

Stage 5: 14-16 Hours After Eating

- As fat-burning continues, fatty acids are converted into ketones via ketosis.
- Ketones provide energy to the brain, heart and other vital organs.

health in an easier and better way. The practice of fasting occasionally helps many people to acknowledge the difference between real hunger and so called false hunger which occurs as a result of the habits of our body and mind. The practice of occasional fasting has huge benefits. First it is necessary to mention the benefits to health such as weight loss, lowering of blood sugar, help with maintaining diabetes, prevention of some diseases such as cancer and many others. Another benefit that attracts the attention of many is connected with the building of muscles. By fasting the body is deprived of food for a time. During periods of fasting there is no allowed consumption of food. This gives our body less calories than the number of daily calories needed which results in a reduction of fatty tissues in the body and helps to create strong muscle. Which Fasting Method Best Suits You? As you can see in the third section there are several known methods with proven results. The Leangains method, the Warrior method, the Eat Stop Eat Fat Loss Forever method, and the Alternate Day Eat all of these methods are put into practice by many people who are amazed by the results. Some of the methods require large meals in the middle of the night but not everybody can practice this. To make sure that you will achieve the best results from fasting it is a good idea to study all methods and choose the one that best suits your lifestyle and daily routine. When our goals are aimed at reducing weight and building muscle it is better to devote the time appointed to exercise and eating. By practicing proper training which means less intense training on the days when we fast and more vigorous training on the days when not fasting we are much more likely to achieve our goal. Ensuring that meals have a correct combination of fats, carbohydrates, and proteins that will contribute to building muscle is important as well. Muscles are mostly made in the kitchen are they not? Of course let's not forget to mention the importance of water in this whole process. Bearing in mind that water makes up the biggest part of the human body its importance is obvious. Consuming the proper amount of water every day will contribute to the ease of dealing with the issue of hunger during fasting and will also help to get the desired muscles. All of the things described in this book are reason enough to decide to try this way of developing thickness and the formation of lean toned muscles. If you decide to try fasting follow the directions given in the last part of this book and make the first step in changing your body, mind and your whole lifestyle. Fasting Charlie Mason ,2021-02-18 If you need to lose weight look great reduce inflammation boost your immunity or a myriad of other benefits then you should consider one of the various intermittent fasting methods There are different forms of intermittent fasting so if you want to fast responsibly then you should find the type of fasting that suits you best For instance there is the 16 8 fasting where you fast for 16 hours and then eat your meals within the remaining 8 hours Then there is the alternate day fast where you fast on one day and eat normally the next You may also choose the extended fast where you fast for a longer period of time such as 8 days or more Traditional fasting has proven to be ineffective with many people unable to cope with the tough requirements Ordinarily people would fast from dawn to dusk for probably an entire month having to endure days on end without proper meals Then once the benefits of fasting are achieved they would resume normal life only for the problems to creep back again This can be very frustrating Fortunately intermittent fasting solves this challenge Rather than go through lengthy periods of fasting all you need to do is identify the most suitable intermittent type of fasting For instance you may choose the 16 8 format where you go for 16 hours without eating anything and only eat within an 8 hour window in any given day Fortunately the 16 hours of fasting include your sleeping time so you will be asleep for about half of that time Intermittent fasting has gained popularity because it offers choice is easy to handle and has a lot of benefits but without the rigors and disadvantages of traditional ways of fasting If you need to lose weight look great reduce inflammation boost your immunity or a myriad of other benefits then you should consider one of the various intermittent fasting methods
