**Flip the Script** J. Griffith Rollefson, 2017-10-23 Hip hop has long been a vehicle for protest in the United States used by its primarily African American creators to address issues of prejudice repression and exclusion But the music is now a worldwide phenomenon and outside the United States it has been taken up by those facing similar struggles Flip the Script offers a close look at the role of hip hop in Europe where it has become a politically powerful and commercially successful form of expression for the children and grandchildren of immigrants from former colonies Through analysis of recorded music and other media as well as interviews and fieldwork with hip hop communities J Griffith Rollefson shows how this music created by black Americans is deployed by Senegalese Parisians Turkish Berliners and South Asian Londoners to both differentiate themselves from and relate themselves to the dominant culture By listening closely to the ways these postcolonial citizens in Europe express their solidarity with African Americans through music Rollefson shows we can literally hear the hybrid realities of a global double consciousness

McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published Tracing the relationship between science and technology from the dawn of civilization to the early twenty first century James E McClellan III and Harold Dorn s bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies McClellan and Dorn identify two great scientific traditions the useful sciences which societies patronized from time immemorial and the exploration of questions about nature itself which the ancient Greeks originated The authors examine scientific traditions that took root in China India and Central and South America as well as in a series of Near Eastern empires in late antiquity and the Middle Ages From this comparative perspective McClellan and Dorn survey the rise of the West the Scientific Revolution of the seventeenth century the Industrial Revolution

and the modern marriage of science and technology They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization This new edition of Science and Technology in World History offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid The Internet and social media receive increased attention Facts and figures have been thoroughly updated and the work includes a comprehensive Guide to Resources incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers
