**Deep Learning: Theory, Architectures and Applications in Speech, Image and Language Processing** Gyanendra Verma, Rajesh Doriya, 2023-08-21 This book is a detailed reference guide on deep learning and its applications. It aims to provide a basic understanding of deep learning and its different architectures that are applied to process images, speech and natural language. It explains basic concepts and many modern use cases through fifteen chapters contributed by computer science academics and researchers. By the end of the book, the reader will become familiar with different deep learning approaches and models and understand how to implement various deep learning algorithms using multiple frameworks and libraries. This book is divided into three parts. The first part explains the basic operating understanding, history, evolution and challenges associated with deep learning. The basic concepts of mathematics and the hardware requirements for deep learning implementation and some of its popular frameworks for medical applications are also covered. The second part is dedicated to sentiment analysis using deep learning and machine learning techniques. This book section covers the experimentation and application of deep learning techniques and architectures in real world applications. It details the salient approaches, issues and challenges in building ethically aligned machines. An approach inspired by traditional Eastern thought and wisdom is also presented. The final part covers artificial intelligence approaches used to explain the machine learning models that enhance transparency for the benefit of users. A review and detailed description of the use of knowledge graphs in generating explanations for black box recommender systems and a review of ethical system design and a model for sustainable education is included in this section. An additional chapter demonstrates how a semi-supervised machine learning technique can be used for cryptocurrency portfolio management. The book is a timely reference for academicians, professionals, researchers and students at engineering and medical institutions working on artificial intelligence applications.

*135 Fun Ideas to Develop Your Child's Creativity* Dimitrina Yorgova, 2014-12-15

Education is not only about being able to read write and count Creativity is a huge part of the educational process and of our lives Children are naturally creative and they like to be busy especially if this is fun and something comes out from their hands Adults often do not recognize the value of this important activity We can not only spend a great time together but we can help our kids develop many skills and abilities It also provides an excellent opportunity for trying new ideas Creativity is what makes a difference in developing creative ways of thinking and problem solving Creativity is much more than product it is a process It is a specific form of self expression It is to learn with inspiration from personal experience The importance of a child's creative process is also in the opportunity to experience and explore materials Cooperation is an important component in the creative process which is directed by the adult but should be a result of the child's preference This kind of activity can help us learn more about our kids about their feelings their way of thinking their uniqueness and their mental and emotional health Childhood development of creativity is not about telling them but showing them and doing it with them
