McClellan, 1998 For senior or introductory graduate level courses in digital signal processing Developed by a group of six eminent scholars and teachers this book offers a rich collection of exercises and projects which guide students in the use of MATLAB v5 to explore major topical areas in digital signal processing

**Signals and Systems with MATLAB Applications** Steven T. Karris, 2003 This text contains a comprehensive discussion of continuous and discrete time signals and systems with many examples from MATLAB software used to write efficient compact programs to solve electrical and computer engineering problems of varying complexity Intended for junior and senior level electrical engineering students and for self study by working professionals it discusses Laplace transformation and circuit analysis impulse response Fourier series Z transform and the Discrete Fourier transform and FFT Solutions to all exercises are included in this revised edition

**Signals and Systems** Steven T. Karris, 2012 This text is primarily written for junior and senior

undergraduates majoring in electrical and computer engineering You will need this text if you are a student or working professional seeking to learn and or review the basics of the Laplace and Z transforms the Fast Fourier Transform FFT state variables design of analog and digital filters window functions cross correlation auto correlation and an example of a describing function Contains many real world examples completely solved in detail and verified with MATLAB script and Simulink models

*Signals and Systems Laboratory with MATLAB* Alex Palamides, Anastasia Veloni, 2010-08-13 Developed as a textbook for the laboratory part of the course Signals and Systems this book introduces students to theory through analytical examples implemented in Matlab code Thus every theoretical equation is accompanied by the corresponding code implementation Instead of using big M Files or author written functions with comments the commands are executed one by one at the Matlab command line and the results along with comments are given side by side in two or three column tables This is very helpful and popular to students in Electrical Engineering since the nature of this course includes detailed mathematical derivations and demands a strong mathematical background

**Signals and Systems with MATLAB** Won Young Yang, 2009-06-18 This book is primarily intended for junior level students who take the courses on signals and systems It may be useful as a reference text for practicing engineers and scientists who want to acquire some of the concepts required for signal processing The readers are assumed to know the basics about linear algebra calculus on complex numbers differentiation and integration differential equations Laplace R transform and MATLAB Some knowledge about circuit systems will be helpful Knowledge in signals and systems is crucial to students majoring in Electrical Engineering The main objective of this book is to make the readers prepared for studying advanced subjects on signal processing communication and control by covering from the basic concepts of signals and systems to manual like introductions of how to use the MATLAB and Simulink tools for signal analysis and filter design The features of this book can be summarized as follows 1 It not only introduces the four Fourier analysis tools CTFS continuous time Fourier series CTFT continuous time Fourier transform DFT discrete time Fourier transform and DTFS discrete time Fourier series but also illuminates the relationship among them so that the readers can realize why only the DFT of the four tools is used for practical spectral analysis and why how it differs from the other ones and further think about how to reduce the difference to get better information about the spectral characteristics of signals from the DFT analysis
