**Parallel simulation** involves the execution of a *single* simulation program on a collection of *tightly* coupled processors (e.g., a shared memory multiprocessor).

**Replicated trials** involves the execution of *several*, independent simulations concurrently on different processors

**Distributed simulation** involves the execution of a *single* simulation program on a collection of *loosely* coupled processors (e.g., PCs interconnected by a LAN or WAN).

## **Parallel And Distributed Simulation Systems:**

**Parallel and Distributed Simulation Systems** Richard M. Fujimoto,2000-01-03 From the preface page xv My goal in writing Parallel and Distributed Simulation Systems is to give an in depth treatment of technical issues concerning the execution of discrete event simulation programs on computing platforms composed of many processores interconnected through a network

**Parallel and Distributed Discrete Event Simulation** Carl Tropper,2002 Discrete event simulation has long been an integral part of the design process of complex engineering systems and the modelling of natural phenomena Many of the systems that we seek to understand or control can be modelled as digital systems In a digital model we view the system at discrete instants of time in effect taking snapshots of the system at these instants For example in a computer network simulation an event can be the sending of a message from one node to another node while in a VLSI logic simulation the arrival of a signal at a gate may be viewed as an event Digital systems such as computer systems are naturally susceptible to this approach However a variety of other systems may also be modelled this way These include transportation systems such as air traffic control systems epidemiological models such as the spreading of a virus and military war gaming models This book is representative of the advances in this field

**Causal Order in Parallel and Distributed Simulation Systems** Yi Zeng,2005

**Large-Scale Computing Techniques for Complex System Simulations** Werner

Dubitzky,Krzysztof Kurowski,Bernard Schott,2012-02-03 Complex systems modeling and simulation approaches are being adopted in a growing number of sectors including finance economics biology astronomy and many more Technologies ranging from distributed computing to specialized hardware are explored and developed to address the computational requirements arising in complex systems simulations The aim of this book is to present a representative overview of contemporary large scale computing technologies in the context of complex systems simulations applications The intention is to identify new research directions in this field and to provide a communications platform facilitating an exchange of concepts ideas and needs between the scientists and technologist and complex system modelers On the application side the book focuses on modeling and simulation of natural and man made complex systems On the computing technology side emphasis is placed on the distributed computing approaches but supercomputing and other novel technologies are also considered
