Electric Vehicles Suzanne Appelt,1966      Artificial Intelligent Techniques for Electric and Hybrid Electric Vehicles Chitra A.,Sanjeevikumar Padmanaban,Jens Bo Holm-Nielsen,S. Himavathi,2020-07-21 Electric vehicles are changing transportation dramatically and this unique book merges the many disciplines that contribute research to make EV possible so the reader is informed about all the underlying science and technologies driving the change An emission free mobility system is the only way to save the world from the greenhouse effect and other ecological issues This belief has led to a tremendous growth in the demand for electric vehicles EV and hybrid electric vehicles HEV which are predicted to have a promising future based on the goals fixed by the European Commission s Horizon 2020 program This book brings together the research that has been carried out in the EV HEV sector and the leading role of advanced optimization techniques with artificial intelligence AI This is achieved by compiling the findings of various studies in the electrical electronics computer and mechanical domains for the EV HEV system In addition to acting as a hub for information on these research findings the book also addresses the challenges in the EV HEV sector and provides proven solutions that involve the most promising AI techniques Since the commercialization of EVs HEVs still remains a challenge in industries in terms of performance and cost these are the two tradeoffs which need to be researched in order to arrive at an optimal solution Therefore this book focuses on the convergence of various technologies involved in EVs HEVs Since all countries will gradually shift from conventional internal combustion IC engine based vehicles to EVs HEVs in the near future it also serves as a useful reliable resource for multidisciplinary researchers and industry teams      Automotive Safety 2024 Marek Jaśkiewicz,Rafał Jurecki,Emilia Szumska,2025-03-11 Automotive Safety 2024 presents a comprehensive selection of 36 papers from the 14th International Science and Technical Conference Automotive Safety 2024 The intricate nature of safety issues and continuous advancements in automotive technology drive a steady stream of novel and captivating scientific and technical developments at each edition of the Conference The contributions delve into a wide range of automotive safety topics from broad based studies to specific applications encompassing object recognition accident reconstruction autonomous vehicles driver behaviour micromobility and the perception of intelligent technologies This book constitutes significant and insightful additions to the knowledge in automotive safety serving as a potential impetus for further scholarly endeavours      Electric Vehicle Developments ,1987      Electric Vehicle Engineering (PB) Per Enge,Nick Enge,Stephen Zoepf,2021-01-24 A complete guide to electric vehicle design operation and adoption This hands on resource thoroughly explains the technologies and techniques involved in the design and operation of today s electric vehicles Originally written for use in a course co taught by the authors at Stanford University Electric Vehicle Engineering discusses the physics of vehicle motion the electrical principles on which motors rely the chemistry operation and charging of lithium ion batteries the design and operation of motor controllers the energy efficiency and environmental impact of electric vehicles and the policy and

economics affecting their adoption After teaching you the theory the authors will guide you through a hands on project in which you will build a model electric car from the ground up with a hand wound electric motor of your own design Coverage includes Introduction to electric vehicles Electric vehicle history Vehicle dynamics Electric motors Lithium ion batteries Controllers Well to wheels energy and emissions analysis Electric vehicle policies and economics Future prospects **Data**

*Electric Vehicles : Economic Costs, Environmental Benefits* Garth Renne, Canadian Energy Research Institute, 1994 **Total Cost of Ownership Comparison for Different Drivetrains of Private Transport Vehicles** Simon Kröger, 2021-03-08 Master s Thesis from the year 2020 in the

subject Business economics Accounting and Taxes grade 1 0 University of Mannheim Chair of Business Administration and Accounting language English abstract Transportation is the source of 25% of the EU 27 greenhouse gas emissions Specifically cars are responsible for around 12% of the EU 27 emissions of carbon Additionally emissions from the transport sector have increased continuously since 2014 Therefore the reduction of emissions from the transport sector is an integral element of the EU climate and energy policy to comply with the Paris Agreement The electrification of the transport sector offers the opportunity to utilize the increasing share of renewable energy generation Thus scholars believe that electric vehicles such as battery electric vehicles BEVs plug in hybrid electric vehicles PHEVs hybrid electric vehicles HEVs and fuel cell electric vehicles FCEVs have the potential to lower emissions and contribute to the transformation of the mobility sector However the breakthrough of electric vehicles still faces several barriers Perhaps the most significant barrier appears to be the public s general consensus that electric drivetrains are more expensive than conventional drives However the literature suggests that electric vehicles might already be more cost efficient than comparable conventional drives Yet the cost benefits

are mostly non transparent to consumers as they put too much weight on the high initial investment costs compared to conventional internal combustion engine vehicles ICEVs and underestimate the cost savings through lower operating costs In order to overcome this misjudgment and to help consumers make more profound purchasing decisions the literature suggests the total cost of ownership TCO approach which includes both investment and operating costs over the ownership period This study aims to compare the consumer oriented TCO for different drivetrains of private transport vehicles in Germany Although the transportation sector emits 19% of Germany s greenhouse gases electric vehicles only account for 17% of the newly registered vehicles in the first half of 2020 As a result the German government approved an increase in subsidies for the purchase of electric vehicles in June 2020 to promote the attractiveness of more environmentally friendly vehicles Against that background this study investigates whether conventional drives still exhibit a financial advantage over electric vehicles For that purpose this study compares the TCO of BEVs PHEVs HEVs FCEVs as well as petrol and diesel ICEVs
