- Mixed-Integer Representations in Control Design Ionela Prodan, Florin Stoican, Sorin Olaru, Silviu-Iulian Niculescu, 2015-11-25 In this book the authors propose efficient characterizations of the non convex regions that appear in many control problems such as those involving collision obstacle avoidance and in a broader sense in the description of feasible sets for optimization based control design involving contradictory objectives The text deals with a large class of systems that require the solution of appropriate optimization problems over a feasible region which is neither convex nor compact The proposed approach uses the combinatorial notion of hyperplane arrangement partitioning the space by a finite collection of hyperplanes to describe non convex regions efficiently Mixed integer programming techniques are then applied to propose acceptable formulations of the overall problem Multiple constructions may arise from the same initial problem and their complexity under various parameters space dimension number of binary variables etc is also discussed This book is a useful tool for academic researchers and graduate students interested in non convex systems working in control engineering area mobile robotics and or optimal planning and decision making
- Optimizing Constrained Control Using Mixed Integer Programming** Heinz Peter Rothwangl, 2001
- Linear-Quadratic Controls in Risk-Averse Decision Making Khanh D. Pham, 2012-10-23 Linear Quadratic Controls in Risk Averse Decision Making cuts across control engineering control feedback and decision optimization and statistics post design performance analysis with a common theme reliability increase seen from the responsive angle of incorporating and engineering multi level performance robustness beyond the long run average performance into control feedback design and decision making and complex dynamic systems from the start This monograph provides a complete description of statistical optimal control also known as cost cumulant control theory In control problems and topics emphasis is primarily placed on major developments attained and explicit connections between mathematical statistics of performance appraisals and decision and control optimization Chapter summaries shed light on the relevance of developed results which makes this monograph suitable for graduate level lectures in applied mathematics and electrical engineering with systems theoretic concentration elective study or a reference for interested readers researchers and graduate students who are interested in theoretical constructs and design principles for stochastic controlled systems
