Mostefaoui, Faisal Tariq, 2018-12-07 The objective of this edited book is to gather best practices in the development and management of mobile apps projects Mobile Apps Engineering aims to provide software engineering lecturers students and researchers of mobile computing a starting point for developing successful mobile apps To achieve these objectives the book s contributors emphasize the essential concepts of the field such as apps design testing and security with the intention of offering a compact self contained book which shall stimulate further research interest in the topic The editors hope and believe that their efforts in bringing this book together can make mobile apps engineering an independent discipline inspired by traditional software engineering but taking into account the new challenges posed by mobile computing **Software Architecture: System Design, Development and Maintenance** Jan Bosch, Morven Gentleman, Christine Hofmeister, Juha Kuusela, 2013-06-29 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already

the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research. However, becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions. On the contrary, one can identify a number of interesting trends within software architecture research. The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized. Whereas initially software architecture was primarily associated with the architecture design phase, we now see that the software architecture is treated explicitly during development, product derivation in software product lines at run time, and during system evolution. Software architecture as an artifact has been decoupled from a particular lifecycle phase.
