Modeling Multiphase Materials Processes Gas Liquid Systems:

Modeling Multiphase Materials Processes Manabu Iguchi, Olusegun J. Ilegbusi, 2010-11-10 *Modeling Multiphase Materials Processes Gas Liquid Systems* describes the methodology and application of physical and mathematical modeling to multi phase flow phenomena in materials processing The book focuses on systems involving gas liquid interaction the most prevalent in current metallurgical processes The performance characteristics of these processes are largely dependent on transport phenomena This volume covers the inherent characteristics that complicate the modeling of transport phenomena in such systems including complex multiphase structure intense turbulence opacity of fluid high temperature coupled heat and mass transfer chemical reactions in some cases and poor wettability of the reactor walls Also discussed are solutions based on experimental and numerical modeling of bubbling jet systems recent advances in the modeling of nanoscale multi phase phenomena and multiphase flows in micro scale and nano scale channels and reactors *Modeling Multiphase Materials Processes Gas Liquid Systems* will prove a valuable reference for researchers and engineers working in mathematical modeling and materials processing

Flow Visualization in Materials Processing Tomomasa Uemura, Yoshiaki Ueda, Manabu Iguchi, 2017-10-05 This book presents a comprehensive review of particle image velocimetry PIV and particle tracking velocimetry PTV as tools for experimental fluid dynamics EFD It shares practical techniques for high speed photography to accurately analyze multi phase flows in particular it addresses the practical know how involved in high speed photography including e g the proper setup for lights and illumination optical systems to remove perspective distortion and the density of tracer particles and their fluorescence in the context of PIV and PTV In this regard using the correct photographic technique plays a key role in the accurate analysis of the respective flow Practical applications include bubble and liquid flow dynamics in materials processes agitated by gas injection at high temperatures mixing phenomena due to jet induced rotary sloshing and wettability effects on the efficiency of the processes
