Modelling Stochastic Fibrous Materials with Mathematica® William Wyatt Sampson, 2008-10-28 Developments in the use of electrospun fibrous materials for application in tissue engineering and in carbon fibrous materials in fuel cells has generated new interest in the dependence of the properties and structure of these materials on those of their constituent fibres *Modelling Stochastic Fibrous Materials with Mathematica* provides an overview of the structure of stochastic fibrous materials and the use of Mathematica to develop models describing their structure and performance The book introduces the techniques of statistical geometry and probabilistic modelling for non mathematicians and assumes no previous experience of Mathematica Using accessible notation and by providing examples of Mathematica code expressions are derived for the structural characteristics of stochastic fibrous materials providing insights into the ways these depend upon each other and the extent to which they can be modified in the laboratory or in a manufacturing environment

Information Geometry Khadiga Arwini, C. T. J. Dodson, 2008-07-19 This volume uses information geometry to give a common differential geometric framework for a wide range of illustrative applications including amino acid sequence spacings cryptology studies clustering of communications and galaxies and cosmological voids

Emergent Technologies and Design Michael Hensel, Achim Menges, Michael Weinstock, 2013-09-13 Emergence the process by which new and coherent structures patterns and properties emerge from within complex systems Traditional architecture starts from the premise that architectural structures are singular and fixed and however well integrated are separate from their environment and context Emergence requires that the opposite is true that those structures are complex energy and material systems that have a lifespan exist as part of an environment of other active systems and develop in an evolutionary way This book based on the authors internationally renowned Emergent Technologies and Design course at the Architectural Association in London introduces a new approach to the practice of architecture The authors use essays and projects to demonstrate the interrelationship of concepts such as emergence and self organisation with the latest technologies in design manufacturing

and construction With projects from their course and critiques and commentary from some of the world s leading design theorists and practitioners the authors of Emergent Technologies and Design have introduced a radical new way of understanding the way in which architecture is conceived designed and produced **Thesaurus of Water Resources**
