Models Openoffice Manual:

Model Driven Engineering Languages and Systems Dorina C. Petriu, Nicolas Rouquette, Oystein Haugen, 2010-09-22 The MODELS series of conferences is the premier venue for the exchange of innovative technical ideas and experiences focusing on a very important new technical discipline model driven software and systems engineering. The expansion of this discipline is a direct consequence of the increasing significance and success of model based methods in practice. Numerous efforts resulted in the invention of concepts, languages and tools for the definition, analysis, transformation and verification of domain specific modeling languages and general purpose modeling language standards, as well as their use for software and systems engineering. MODELS 2010, the 13th edition of the conference series, took place in Oslo, Norway, October 3-8, 2010, along with numerous satellite workshops, symposia and tutorials. The conference was fortunate to have three prominent keynote speakers: Ole Lehrmann Madsen (Aarhus University, Denmark), Edward A. Lee (UC Berkeley, USA) and Pamela Zave (AT&T Laboratories, USA). To provide a broader forum for reporting on scientific progress as well as on experience stemming from practical applications of model based methods, the 2010 conference accepted submissions in two distinct tracks: Foundations and Applications. The primary objective of the first track is to present new research results dedicated to advancing the state of the art of the discipline, whereas the second aims to provide a realistic and verifiable picture of the current state of the practice of model based engineering, so that the broader community could be better informed of the capabilities and successes of this relatively young discipline. This volume contains the final version of the papers accepted for presentation at the conference from both tracks.

[The Fiesta Data Model](#) Peter Menke, 2016-03-11 Diese Dissertation stellt ein Datenmodell zur Repräsentation experimentbasierter Datensätze aus dem Forschungsgebiet der multimodalen Kommunikation vor. Es werden Belege für die Existenz verschiedener Probleme und Unzulänglichkeiten in der Arbeit mit multimodalen Datensammlungen aufgezeigt. Diese resultieren aus einer Analyse bestehender multimodaler Korpora und basieren auf einer Umfrage an der Wissenschaftlerinnen teilgenommen haben, die zu konkreten Problemen in der Arbeit mit ihren multimodalen Datensammlungen befragt wurden. Auf dieser Grundlage wird herausgearbeitet, dass trotz der Existenz einer Vielzahl von Datenmodellen und Formalismen zur Darstellung klassischer Textkorpora sich diese nicht eignen um die den multimodalen Korpora eigenen Besonderheiten abzubilden. Zu können. Aus diesem Grund wird ein Datenmodell entwickelt, das alle jene spezifischen Eigenschaften multimodaler Korpora berücksichtigen sucht. Dieses Datenmodell bietet Lösungen speziell für die Arbeit mit einer oder mehreren Zeitachsen und Raumkoordinaten für die Darstellung komplexer Annotationswerte und für die Transformation zwischen verschiedenen bisher inkompatiblen Dateiformaten. verbreiteter Annotationswerkzeuge.
