**Higher-Order Systems** Federico Battiston, Giovanni Petri, 2022-04-26 The book discusses the potential of higher order interactions to model real world relational systems. Over the last decade networks have emerged as the paradigmatic framework to model complex systems. Yet as simple collections of nodes and links they are intrinsically limited to pairwise interactions, limiting our ability to describe, understand and predict complex phenomena which arise from higher order interactions. Here we introduce the new modeling framework of higher order systems where hypergraphs and simplicial complexes are used to describe complex patterns of interactions among any number of agents. This book is intended both as a first introduction and an overview of the state of the art of this rapidly emerging field, serving as a reference for network scientists interested in better modeling the interconnected world we live in.

**The Atlantic Forest** Marcia C. M. Marques, Carlos E. V. Grelle, 2021-01-13 The Atlantic Forest is one of the 36 hotspots for biodiversity conservation worldwide. It is a unique, large biome, more than 3000 km in latitude, 2500 in longitude, marked by high biodiversity, high degree of endemic species and, at the same time, extremely threatened. Approximately 70% of the Brazilian population lives in the area of this biome, which makes the conflict between biodiversity conservation and the sustainability of the human population a relevant issue. This

book aims to cover 1 the historical characterization and geographic variation of the biome 2 the distribution of the diversity of some relevant taxa 3 the main threats to biodiversity and 4 possible opportunities to ensure the biodiversity conservation and the economic and social sustainability Also it is hoped that this book can be useful for those involved in the development of public policies aimed at the conservation of this important global biome Teacher's Guide to the Modern Biology Program James Howard Otto,Albert Towle,Elizabeth H.
