Sustainable synthesis of cyclopentene derivatives through multicomponent reactions in continuous flow regime Yoisel Bueno Broterson,2024-02-01 At present a highly efficient tool for organic synthesis is the combination of organocatalytic and multicomponent processes In the organocatalysis reaction it is possible to generate a reactive intermediate with high enantioselectivity and later in the multicomponent stage the complexity and structural diversity of the process increases This strategy allows the synthesis of various analogues of optically active natural compounds and biologically relevant molecules of pharmacological interest which are essential for human life The current study which is divided into three chapters describes a methodology for the synthesis of tetrasubstituted cyclopentene derivatives from an organocatalytic reaction followed by a multicomponent Ugi type reaction under continuous flow regime The use of green solvents in each reaction step as well as the adoption of flow chemistry led to obtaining products with high yield and enantiomerically enriched in a fast and efficient manner allowing the development of more sustainable strategies in synthetic chemistry **Checklist of Books and Pamphlets in Science and Technology** New York State Library,1960 *Community and Junior College Journal* ,1974 **Health Science Books, 1876-1982** ,1982 **Catalog of Copyright Entries, Third Series** Library of Congress.
