*Proceedings of the 2003 ACM SIGCOMM Internet Measurement Conference*, 2003 Internet Service Providers (ISPs) can exploit path diversity to balance load and improve robustness. Unfortunately, it is difficult to evaluate the potential impact of these approaches without routing and topological data which are confidential. In this paper, we characterize path diversity in the real Sprint network. We then characterize path diversity in ISP topologies inferred using the Rocketfuel tool. Comparing the real Sprint topology to the one inferred by Rocketfuel, we find that the Rocketfuel topology has significantly higher apparent path diversity. As a metric, path diversity is particularly sensitive to the presence of false or missing links, both of which are artifacts of active measurement techniques. We evaluate heuristics that improve the accuracy of the inferred Rocketfuel topologies. Finally, we discuss limitations of active measurements techniques to capture topological properties such as path diversity.

**Cisco Router Configuration and Troubleshooting** Mark Tripod, 2000 For courses in Cisco Technology, Cisco Guides and Certification: Routing and Switching and Network Management, Cisco Router Configuration and Troubleshooting, Second Edition serves as a reference for students studying network and system administration. If your course tackles how to configure and maintain existing Cisco routers as well as get new hardware up and running, add this book to your reading list. The author begins by touching on the foundation behind routing technology, networks, protocols, and hardware. Then he jumps right into router configuration, discussing setup, local and wide area networking, security, and monitoring. By providing advice and preferred practices instead of just rehashing Cisco documentation, Tripod gives students information they can start using today. The troubleshooting section uses a fictitious company to illustrate the different scenarios an administrator might encounter. It includes situations that deal with Cisco routers as well as hardware from other companies, mimicking the heterogeneous environment most administrators face.
