

5. Base your answer to the following question on the following information and diagram as well as your knowledge of biology.

A cube cut from a potato is placed in a beaker of distilled water. The potato cells have a relatively high concentration of starch and a relatively low concentration of water. The diagram represents the water and starch molecules in and around one of the potato cells in contact with the water in the beaker.

Which row in the chart correctly describes what would be expected to occur in the potato cells, with regard to both the starch and water molecules?

Row	Water	Starch
(1)	More water will move into the cell than will leave the cell.	Starch will remain inside the potato cell.
(2)	More water will leave the cell than will enter.	Starch will move out of the cell.
(3)	Water content of the cell will not change.	Starch will move out of the cell.
(4)	More water will leave the cell than will enter.	Starch will remain inside the potato cell.

A) 1

B) 2

C) 3

D) 4

6. In some single-celled protozoans living in fresh water, such as the paramecium, contractile vacuoles are organelles used to pump excess water out of the cell. Explain why a paramecium would require contractile vacuoles while a similar protozoan living in salt water would not.
7. As fish are frozen for storage, the water in the cells expands as it cools from -4°C to 0°C and many cause cells to burst. This lowers the quality of the fish. Explain how soaking the fish briefly in salt water before freezing them might prevent this damage to the cells.

The Environment for Aging Russell A. Ward,Mark La Gory,Susan R. Sherman,1988 The nature and consequences of aging depend on its environmental context and the literature does not treat the various environmental dimensions in an integrated fashion The authors introduce a general approach to the human ecosystem highlighting theoretical and empirical issues necessary to an understanding of person environment interaction related to aging They then investigate in detail three aspects of the environment of older persons residential and neighborhood interpersonal support networks and age related attitudes They give specific attention to the impact of the age composition of neighborhoods and interpersonal networks The authors present findings from their interview survey of 1 185 community residents aged 60 and over Major findings from the interviews include Despite objective neighborhood problems older persons express high neighborhood satisfaction This partly reflects limited residential options as well as a passive and vicarious spatial experience The environment is experienced in diverse ways however urbanism and personal competence shape the nature and outcomes of person environment interaction Older persons have relatively robust interpersonal support networks Perceived sufficiency of contact and support are more salient to morale than are more objective measures of interpersonal support Although attitudes toward other older people are generally favorable patterns of age identity reflect a detrimental view of aging There is little evidence that socialization for aging or age group solidarity make aging easier in this regard Older persons exhibit moderate age homogeneity within their interpersonal networks partly reflecting neighborhood age concentration Contrary to the apparent benefits of planned age segregated housing age homogeneity in neighborhoods and networks does not contribute to well being The authors examine three major themes in their concluding chapter age itself does not loom large in the lives of these community residents though age becomes salient under certain conditions there is diversity in the implications of the environmental context for aging in particular reflecting an environmental docility hypothesis and aging
