## **Operating Systems Principles And Practice Volume 1 Of 4:**

*Operating System Concepts* Abraham Silberschatz, Peter B. Galvin, Greg Gagne, 2005 This new seventh edition of the book has been brought up to date to include recent developments in operating systems such as Windows XP and the new small footprint operating systems that work in hand held devices such as the Palm and in cell phones. Most of the book is on general purpose operating systems such as Linux and those from Microsoft. But at the end of the book there are chapters on other types of operating such as Real Time Operating Systems and MultiMedia OS's. Finally there are some chapters which the authors call case studies. In these one chapter goes into a detailed discussion of Linux another chapter covers Windows XP. Chapter 23 covers several early operating systems that helped to define the features that make up modern OS's. These include Atlas, XDS 940, THE, RC 4000, CTSS, MULTICS, OS 360 and MACH along with brief mentions of several others. Note that this is not a book on how to use operating systems this is a book on how operating systems are designed. It is intended for upper level undergraduate students or first year graduate students.

*Operating Systems Concepts with Java* Abraham Silberschatz, Greg Gagne, Peter B. Galvin, 2004 New edition of the bestseller provides readers with a clear description of the concepts that underlie operating systems. Uses Java to illustrate many ideas and includes numerous examples that pertain specifically to popular operating systems such as UNIX, Solaris 2, Windows NT and XP, Mac OS, the Apple Macintosh OS, IBM's OS 2 and Linux. Style is even more hands on than the previous edition with extensive programming examples written in Java and C. New coverage includes recent advances in Windows 2000, XP, Linux, Solaris 9 and Mac OS X. Detailed case studies of Windows XP and Linux give readers full coverage of two very popular operating systems. *Advances in Computer Systems Architecture* Thambipillai Srikanthan, Jingling Xue, Chip-Hong Chang, 2005-10-19 On behalf of the Program Committee we are pleased to present the proceedings of the 2005 Asia Pacific Computer Systems Architecture Conference ACSAC 2005 held in the beautiful and dynamic country of Singapore. This conference was the tenth in its series one of the leading forums for sharing the emerging research findings in this field. In consultation with the ACSAC Steering Committee we selected a member Program Committee. This Program Committee represented a broad spectrum of research expertise to ensure a good balance of research areas.

stitutions and experience while maintaining the high quality of this conference series. This year's committee was of the same size as last year but had 19 new faces. We received a total of 173 submissions which is 14% more than last year. Each paper was assigned to at least three and in some cases four Program Committee members for review. Wherever necessary the committee members called upon the expertise of their colleagues to ensure the highest possible quality in the reviewing process. As a result we received 415 reviews from the Program Committee members and their 105 co reviewers whose names are acknowledged in the proceedings. The conference committee adopted a systematic blind review process to provide a fair assessment of all submissions. In the end we accepted 65 papers on a broad range of topics giving an acceptance rate of 37.5%. We are grateful to all the Program Committee members and the co reviewers for their efforts in completing the reviews within a tight schedule.

*Introduction to Reliable and Secure Distributed Programming* Christian Cachin, Rachid

Guerraoui, Luís Rodrigues, 2011-02-11. In modern computing a program is usually distributed among several processes. The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail. Failures may range from crashes to adversarial attacks by malicious processes. Cachin, Guerraoui and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems where processes are subject to crashes and malicious attacks. The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments. Each core chapter is devoted to one topic covering reliable broadcast, shared memory consensus and extensions of consensus. For every topic many exercises and their solutions enhance the understanding. This book represents the second edition of *Introduction to Reliable Distributed Programming*. Its scope has been extended to include security against malicious actions by non-cooperating processes. This important domain has become widely known under the name Byzantine fault tolerance.
