Comparing Decimals

Comparing decimals is a process of determining which decimal is greater or smaller than the other. This can be done by comparing the digits in each decimal number, starting from the leftmost digit (the ones place) and moving to the right.

For example, let's compare 0.45 and 0.54. We start by comparing the tenths place. In 0.45, the tenths digit is 4, and in 0.54, the tenths digit is 5. Since 5 is greater than 4, we can conclude that 0.54 is greater than 0.45.

Another way to compare decimals is to convert them into fractions and then compare the fractions. For example, to compare 0.25 and 0.33, we can convert them into fractions: 0.25 is equivalent to $\frac{1}{4}$ and 0.33 is equivalent to $\frac{33}{100}$. Since $\frac{1}{4} = \frac{25}{100}$, we can see that $\frac{25}{100} < \frac{33}{100}$, which means that 0.25 is less than 0.33.

It's important to note that when comparing decimals, we should always compare the digits in the same place value. For example, if we compare 0.45 and 0.5, we should compare the tenths place (4 and 5) rather than the hundredths place (5 and 0).
