### Force & Motion

#### Terms to Know

- Energy: Energy: The energy of motion
- Motion: The direction and speed of an object
- Speed: How fast an object is moving
- Force: A push or pull that causes an object to move, stop, or change direction
- Friction: A force that opposes the motion of an object
- Mass: The amount of matter an object contains

#### Energy Transfer

When objects collide, the energy from one object transfers to another object. That transfer in energy can change an object's speed or direction.

Example:  
A soccer ball is rolling slowly down the field. A boy kicks the ball. The ball begins moving more quickly and in the opposite direction. Energy was transferred to the ball, causing it to change speed and direction.

#### Friction

Friction is a force that opposes the motion of an object. Friction makes an object slow down.

Example:  
A hockey puck is sliding across ice. As it rolls against the ice, it creates friction. The friction causes the puck to slow down until it stops.

#### Laws of Motion

The Laws of Motion tell us:

- An object at rest remains at rest unless acted on by a force
- An object in motion remains in motion unless acted on by a force

Example:  
A suitcase is not moving. It will remain at rest until someone pulls the handle, causing it to move.

#### Mass and Force

Mass affects the motion of an object when a force is applied.

Objects that have the same mass...  
The greater the force, the greater the change in motion.

Objects that have a different mass...  
The more massive an object, the less effect a given force will have on that object.

Example:  
An empty shopping cart is easy to push. As you fill the shopping cart, more force is needed to push it.

with toy cars. Onion rolls a red car into a blue car into the red car. What will happen when it is struck by the blue car?

The following three surfaces: marble, sidewalk, and wood. She uses the same amount of force. List the surfaces in order from across the fastest to the surface the wagon. One of the kids decides to pull a wagon. How will this change the amount of force? Explain your answer.

If the hose is turned on, the fireman gets pushed back?
