Metric Methods for Analyzing Partially Ranked Data Douglas E. Critchlow, 1985 **Metric Methods for Analyzing Partially Ranked Data** Douglas E. Critchlow, 2012-12-06 A full ranking of n items is simply an ordering of all these items of the form first choice second choice n th choice. If two judges each rank the same n items, statisticians have used various metrics to measure the closeness of the two rankings, including Kendall's tau, Spearman's rho, Spearman's footrule, Ulam's metric, Hamming distance, and Cayley distance. These metrics have been employed in many contexts in many applied statistical and scientific problems. This monograph presents general methods for extending these metrics to partially ranked data. Here, partially ranked data refers, for instance, to the situation in which there are n distinct items but each judge specifies only his first through k th choices, where $k < n$.

Probability Models and Statistical Analyses for Ranking Data Michael A. Fligner, Joseph S. Verducci, 2012-12-06 In June of 1990, a conference was held on Probability Models and Statistical Analyses for Ranking Data under the joint auspices of the American Mathematical Society, the Institute for Mathematical Statistics, and the Society of Industrial and Applied Mathematicians. The conference took place at the University of Massachusetts Amherst and was attended by 36 participants, including statisticians, mathematicians, psychologists, and sociologists from the United States, Canada, Israel, Italy, and The Netherlands. There were 18 presentations on a wide variety of topics involving ranking data. This volume is a collection of 14 of these presentations, as well as 5 miscellaneous papers that were contributed by conference participants. We would like to thank Carole Kohanski, summer program coordinator for the American Mathematical Society, for her assistance in arranging the conference; M. Steigerwald for preparing the manuscripts for publication; Martin Gilchrist at Springer Verlag for editorial advice and Persi Diaconis for contributing the Foreword. Special thanks go to the anonymous referees for their careful readings and constructive comments. Finally, we thank the National Science Foundation for their sponsorship of the AMS-IMS-SIAM Joint Summer Programs.

Statistical Models and Methods for Data Science Leonardo Grilli, Monia Lupparelli, Carla Rampichini, Emilia Rocco, Maurizio Vichi, 2023-07-24 This book focuses on methods and models in classification and data analysis and presents real world applications at the interface with data science. Numerous topics are covered, ranging from statistical inference and modelling to clustering and factorial methods and from directional data analysis to time series analysis and small area estimation. The applications deal with new developments in a variety of fields, including medicine, finance, engineering, marketing and cyber risk. The contents comprise selected and peer-reviewed contributions presented at the 13th Scientific Meeting of the Classification and Data Analysis Group of the Italian Statistical Society CLADAG 2021 held online in Florence, Italy, on September 9-11, 2021. CLADAG promotes advanced methodological

research in multivariate statistics with a special focus on data analysis and classification and supports the exchange and dissemination of ideas methodological concepts numerical methods algorithms and computational and applied results at the interface between classification and data science **Robust Statistics, Data Analysis, and Computer Intensive**

Methods Helmut Rieder,2012-12-06 To celebrate Peter Huber's 60th birthday in 1994 our university had invited for a festive occasion in the afternoon of Thursday June 9. The invitation to honour this outstanding personality was followed by about fifty colleagues and former students from mainly all over the world. Others who could not attend sent their congratulations by mail and e-mail. It's hard to imagine that Peter turned 60. After a welcome address by Adalbert Kerber, dean, the following lectures were delivered: Volker Strassen, Konstanz, Almost Sure Primes and Cryptography; an Introduction by Frank Hampel, Zurich; On the Philosophical Foundations of Statistics 1; Andreas Buja, Murray Hill, Projections and Sections; High Dimensional Graphics for Data Analysis. The distinguished speakers lauded Peter Huber as a hard and fair mathematician, a cooperative and stimulating colleague, and an inspiring and helpful teacher. The Festkolloquium was surrounded with a musical program by the University's Brass Ensemble. The subsequent Workshop Robust Statistics, Data Analysis, and Computer Intensive Methods in Schloss Thurnau, Friday until Sunday June 9-12, was organized about the areas in statistics that Peter Huber himself has markedly shaped. In the time since the conference, most of the contributions could be edited for this volume, a late birthday present that may give a new impetus to further research in these fields. [Advanced Computing in Industrial Mathematics](#) Ivan Georgiev, Hristo Kostadinov, Elena Lilkova, 2021-04-03 This book gathers the peer-reviewed proceedings of the 13th Annual Meeting of the Bulgarian Section of the Society for Industrial and Applied Mathematics (BGSIAM 18) held in Sofia, Bulgaria. The general theme of BGSIAM 18 was industrial and applied mathematics with particular focus on mathematical physics, numerical analysis, high performance computing, optimization and control, mathematical biology, stochastic modeling, machine learning, digitization and imaging, advanced computing in environmental, biomedical and engineering applications. Olwell, 2007-01-15 With the realization that many clues and hints preceded the September 11 terrorist attacks, statisticians became an important part of the global war on terror. This book surveys emerging research at the intersection of national security and statistical sciences. In it, a diverse group of talented researchers address such topics as Syndromic Surveillance Modeling and Simulation, Biometric Authentication, and Game Theory. The book includes general reviews of quantitative approaches to counterterrorism for decision makers with policy backgrounds as well as technical treatments of statistical issues that will appeal to quantitative researchers. Sciences is the number one source of information on statistical theory methods and applications for researchers and clinicians. This new volume is the last of three updates designed to bring the Encyclopedia in line with new and emerging topics and important advances in statistical science made over the past decade. Each self-contained entry is written by a leader in the field and easily understood by readers with a modest statistical background. In addition to the main selections which feature fascinating discussions of developments in various branches of the statistical sciences, readers will find a series of shorter entries ranging in subject matter from the lives of pioneers in statistics to updates of earlier articles and reviews of statistical agencies and journals. Up-to-date bibliographies, thorough cross referencing and extensive indexing facilitate quick access to specific information and provide an indispensable platform for further study and research. A cumulative index and listing of all the entries in the 13 volumes of the Encyclopedia together with the corresponding authors are included. With the publication of this update, the Encyclopedia of Statistical Sciences retains its position as the only cutting edge reference of choice for those working in statistics, probability theory, biostatistics, quality control and economics, and in applications of statistical methods in sociology, engineering, computer and communication science, biomedicine, psychology and many other areas.
