**Large-Scale Studies in Mathematics Education** James A. Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume

devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies

heights below above control CTRL For instance the conversion of land cover from CTRL to grassland reduced 2 m temperature and PBL heights by 0.6°C and 228 m respectively compared to CTRL due to an evaporative advantage lower stomata resistance Multiple types of land use change were found to either offset or enhance overall modeled response to LULCC A reduction in FV to 25% over grassland diminished ET despite the evaporation advantage of grassland and increased 2 m temperature and PBL heights with respect to CTRL by 3°C and 504 m These results significantly altered horizontal and vertical wind fields affecting moisture advection and the development of meso scale circulations Compared to CTRL these differences were enhanced over drier soils but muted over moist soils Moreover the impact of LULCC on atmosphere evolution was not only dependent on the type of LULCC but also on the current state of other unaltered land surface features such as vegetation type FV and SM Alterations to modeled PBL development as a result of LULCC can have important impacts on a region's climatology and air quality Simulated changes in typical PBL moisture and temperature through time can affect local and regional climatology Depending on the type of LULCC these alternations in climate may lead to localized cooling In addition it was further hypothesized that changes in PBL height can affect air quality Given the capping inversion layer at the top of the PBL changes in PBL heights can significantly affect air quality with lower higher PBL heights diminishing enhancing air quality Moreover this research prescribes the importance of considering LULCC in atmospheric assessments of climatology and air quality including pollutant dispersion and trajectory modeling
