NEWTON'S SECOND LAW

Use the following equation to answer the questions below.

Force = Mass x a
F = M x a

1. A 1000 kg whale is dropped at a rate of 10 m/s. Is the whale?

2. What is the rate of acceleration for a being pushed with a force of 1000 N?

3. A 100 kg computer experiences a rate of 10 m/s. Is the computer?

4. A 1000 kg balloon is falling at a rate of 10 m/s. Is the balloon?

5. What is the rate of acceleration for a planet with a mass of 1000 kg?

6. A 1000 kg motorcycle experiences a rate of 10 m/s. Is the motorcycle?

NEWTON'S LAW

Newton's 1st Law

The object will remain at rest or in motion.

Newton's 1st Law requires the following:
1. The object will remain at rest or in motion.

1. Why does nothing move on the ground at night? (This is what you think it is.)
2. Perhaps you've never thought about the forces behind Newton's Third Law.

Newton's Third Law says that for every

action, there is an equal and opposite reaction.

This means that when you push on an object, the object pushes back on you with an equal and opposite force.

Newton's Third Law is the reason why a ball only goes as far as it did when you threw it. When you throw a ball, it goes in one direction, and when you catch it, it goes in the opposite direction.

Newton's Third Law is also the reason a ball only goes as far as it did when you threw it.

Gravity pulls the ball back with a force of gravity, and the ball responds by pulling back with that same force. This results in a net force of zero on the object, which is why it comes to rest (just as Newton's First Law predicted).

The second half of the second law states that "the acceleration of an object is directly proportional to the mass of the object." **Newton's third law** requires that an object experiences an equal and opposite reaction.

If you apply the same force to the beach and the floating ball, both have a larger or not different reaction force, which means

both of these interactions can be force *equal* in terms of acceleration. If you have seen this equation in past, the third term applied to a specific mass, it can of acceleration.

NEWTON'S LAW

Newton's 2nd Law

The greater the acceleration of an object, the greater the force applied.

Newton's 2nd Law requires the following:
1. The object will accelerate at a rate proportional to the force applied.

1. Why does a pencil fall when you drop it?

2. Perhaps you've never thought about the forces behind Newton's Third Law.

Newton's Third Law says that objects will move in the same way they are moving, along roads, which they were moving because of the forces that applied them. So, why don't we see objects that are moving continue to move at the same speed and in the same direction forever?

Newton's Second Law states that objects will move in the same way they are moving, along roads, which they were moving because of the forces that applied them. So, why don't we see objects that are moving continue to move at the same speed and in the same direction forever?

Discovering Science Through Inquiry: Forces and Motion Kit Kelli Allen,2009-11-10 The Discovering Science through Inquiry series provides teachers and students of grades 3-8 with direction for hands on science exploration around particular science topics and focuses. The series follows the 5E model: engage, explore, explain, elaborate, evaluate. The Forces and Motion kit provides a complete inquiry model to explore the laws of motion through supported investigation. Watch as students design a safe landing parachute to observe how the forces of deceleration work on parachutes. Forces and Motion kit includes 16 Inquiry Cards in print and digital formats, Teacher's Guide, Inquiry Handbook. Each kit includes a single copy; additional copies can be ordered. Creating Thinking Classrooms Garfield Gini-Newman, Roland Case, 2018-03-22 Reinvigorating today's schools with Critical, Creative, and Collaborative thinking. Critical, creative, and collaborative thinking should be at the centre of all 21st century teaching and learning. Creating Thinking Classrooms is loaded with examples, stories, and strategies for reinvigorating schools with this quality thinking. Written for leaders who

support teachers this guide treats educational change as a process of renovation rather than process of revolution and emphasizes building upon refining and sustaining the many good things happening in today's schools Practical and user friendly it emphasizes five key principles for learning and teaching Engaging students Sustaining inquiry Nurturing self regulated learners Creating assessment rich learning Enhancing learning through digital technology As a balanced and reasoned response to the challenges and opportunities facing schools this book separates the rhetoric of school reform from reality by analyzing what's actually happening and offering a plan educators can use Recapture the fundamentals of classroom learning with a practical and powerful roadmap charting the way forward As a principal and community superintendent I observed firsthand how transformational the work of Garfield Gini Newman and Roland Case is in the school community and on a systemic level in the school community and on a systemic level Creating Thinking Classrooms takes theory and research and places it directly into the hands of practitioners by offering thoughtful and immediately useful strategies Not only does this work transform engagement and achievement but it also transforms thinking for both teachers and their students Teaching and learning go from passive acquisition of information to active purposeful and deliberate interaction with the curriculum It is a must read Ursula A Hermann Ph D retired principal and community superintendent Montgomery County Public Schools What impresses me most about Creating Thinking Classrooms is the notion of framing the retooling of schools as renovation or reinvigoration rather than as revolution Too many seem to ignore that there are many good things worth preserving in our schools and others that need to be reframed or recast to give them greater currency This book builds on what has worked and makes it better The message being purposeful and patiently focused on long term success is a powerful one that needs to be heard above the din David Chojnacki Executive Director Near East South Asia Council of Overseas Schools
