## Ai Image Generator Uber Update:

**How to Teach AI** Rachelle Dené Poth, 2024 Get practical tools and strategies for teaching AI across the K-12 curriculum with this accessible guide. As AI continues to transform our world, educators have a responsibility to stay current with the changes and ensure that students have the necessary knowledge and skills to succeed in the future. Written by an educator who is currently teaching on this topic, *How to Teach AI* shares practical strategies and tools based on what good practice looks like in the classroom right now. Readers will build confidence in integrating AI into their curriculum so they can effectively prepare students for their careers. Taking a friendly and accessible approach, the book covers a range of topics related to AI such as machine learning, robotics, and natural language processing, and includes examples of how these technologies are being implemented in different industries and their impact on education. The book includes a chapter dedicated to the ethics of AI, addressing issues around bias, intellectual property, student data privacy, and more. The book includes ideas for using generative AI in the classroom and tips for writing effective prompts. Activity ideas across content areas including computer science, economics, literature, music, and more. Time-saving ideas for teachers and study aids for students to explore AI-powered tool recommendations for teachers. Questions for reflection in every chapter. With examples from educators in the field and a variety of resources to apply in the classroom, this book helps educators become comfortable with this important topic and create meaningful learning experiences for their students.

**Humane Autonomous Technology** Rebekah Rousi, Catharina von Koskull, Virpi Roto, 2024-10-21 This open access book takes a human-focused multidisciplinary look at the ways in which autonomous technology shapes experience, affecting human lives and ways of working in settings ranging from the arts, design and service to maritime and industry. The book focuses on the humane, observing how technology can be designed and implemented in an ethical, human-centered way. Chapters in this book highlight factors that impinge on the humane and ethical, such as challenging questions of intellectual property rights, roles of humans, biases and the uptake of other deviant human traits. Through delving into a range of dimensions and contexts from culture, the arts and design to service, heavy industry and maritime, the contributors demonstrate that artificial intelligence and its related autonomous systems need to be understood holistically as a system of systems that should be working for the benefit of human present and future.
