Infrastructures, Key Resources, Key Assets Adrian V. Gheorghe,Dan V. Vamanu,Polinapapilinho F. Katina,Roland Pulfer,2017-11-12 In the face of increasing failures comments attributed to Albert Einstein loom large We cannot solve our problems with the same thinking we used when we created them There is a pervasive feeling that any attempt to make sense of the current terrain of complex systems must involve thinking outside the box and originating unconventional approaches that integrate organizational managerial social political cultural and human aspects and their interactions This textbook offers research based models and tools for diagnosing and predicting the behavior of complex techno socio economic systems in the domain of critical infrastructures key resources key assets and the open bazaar of space undersea and below ground systems These models exemplify emblematic models in physics within which the critical infrastructures as well as society

itself and its paraphernalia share the profile of many body systems featuring cooperative phenomena and phase transitions the latter usually felt as disruptive occurrences The book and its models focus on the analytics of real life business actors including policy makers financiers and insurers industry managers and emergency responders *Multicriteria and Clustering* Zacharoula Andreopoulou,Christiana Koliouka,Constantin Zopounidis,2017-04-20 This book provides an introduction to operational research methods and their application in the agrifood and environmental sectors It explains the need for multicriteria decision analysis and teaches users how to use recent advances in multicriteria and clustering classification techniques in practice Further it presents some of the most common methodologies for statistical analysis and mathematical modeling and discusses in detail ten examples that explain and show hands on how operational research can be used in key decision making processes at enterprises in the agricultural food and environmental industries As such the book offers a valuable resource especially well suited as a textbook for postgraduate courses **Public Administration and**

Decision-Aiding Software Stuart S. Nagel,1990-10-16 This contributed volume offers a summary of the latest ideas and applications concerning decision making software as applied to administrative decision making and public policy making Stuart Nagel the editor of this work defines the essence of decision aiding software to be software that is designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Containing contributions from both practitioners and theorists this book should be of immediate value to those professionals involved in the field of public administration The book is organized in terms of the major fields of public administration which have been divided into staff procedural activities and into line substantive activities The first part of the book deals with cross cutting procedures including organization theory policy analysis and financial management The second part deals with substantive chapters including criminal justice health environmental energy and transportation as administrative fields The third part of the book involves chapters which combine procedures and substance It includes developmental policy with chapters emphasizing the perspectives of people from developing countries toward the relevance of computers and decision aiding software It also includes the perspective of people from more developed countries trying to apply policy analysis methods to developmental policy The third part also deals with public administration education It emphasizes data banks that are available through telecommunications systems to aid in teaching various aspects of public administration procedures and substance This book should be of interest to public administrators and scholars of the field **Developing Nations and**

Super-optimum Policy Analysis Stuart S. Nagel,Miriam K. Mills,1993 The key purpose of this book is to apply decision aiding software and super optimum solutions to the public policy problems of developing nations Decision aiding software refers to microcomputer programs that can process a set of societal goals to be achieved public policy alternatives for achieving them and relations between goals and alternatives Super optimum solutions refer to policy alternatives that enable

liberals conservatives or other major viewpoints to exceed their initial best expectations simultaneously This approach can be applied to policy problems that relate on a general level to technology economics sociology and political science This approach is also applicable to more specific policy problems that relate to labor management relations transportation agriculture education employment and defense Multi-Criteria Decision Analysis Igor Linkov,Emily Moberg,2017-03-29 Environmental management is often complicated and multidisciplinary and the issues that arise can be difficult to solve analytically Often decision makers take ad hoc approaches which may result in the ignoring of important stakeholder opinions or decision criteria Multi criteria decision analysis MCDA provides a framework by which these types of decisions can be made but despite being used effectively in many fields it is not often used in environmental management Given the novelty and inherent applicability of this decision making framework to the environmental field there is a need for more teaching tools for MCDA In particular there is a need for a case study based approach to help readers navigate the many MCDA methods and decide how to apply them to a specific case Through a collection of case studies Multi Criteria Decision Analysis Environmental Applications and Case Studies gives readers the tools to apply cutting edge MCDA methods to their own environmental projects It offers an overview of the types of MCDA available and a conceptual framework of how it is applied with the focus on its applicability for environmental science Taking an in depth look at the case of sediment management the book introduces different steps of MCDA processes from problem formulation and model development to criteria weighing and alternative scoring The authors then explore the case using various MCDA methods which allows readers to see clearly how the methodologies differ and gain a better understanding of the mechanistic operation of the analysis A series of case studies in nanotechnology collectively demonstrate the application of MCDA in situations of high variability and uncertainty that require the integration of technical information and expert judgment an area where MCDA clearly shines The authors describe multiple decisions from risk classification to value of information analysis to the assessment of potential research and funding investments that readers may face in dealing with emerging environmental threats Demonstrating the broad applicability of MCDA methods for different types of cases the book presents a series of case studies ranging from oyster restoration to oil spill response In conjunction with these cases the book also provides corresponding decision models that are implemented by the DECERNS software and allow users to examine the same case using multiple MCDA tools The DECERNS software and models are available for download at www.crcpress.com Intended both as a research and teaching tool this book inspires creative thinking when applying MCDA to complicated environmental issues Decision-Aiding Software and Legal Decision-Making Stuart S. Nagel,1989-09-26 The use of microcomputers as decision aids in law practice is increasing rapidly Nagel here shows how developments in software over the last few years are making microcomputers practically indispensable to lawyers as decision aids This is in contrast to his earlier book on Microcomputers as Decision Aids in Law Practice It dealt speculatively with ways in which decision aiding software could be

used by lawyers for judicial prediction litigation strategy allocating scarce resources and negotiation mediation The book is divided into three parts covering general developments specific lawyer skills and application to all fields of law The first part previews various uses of decision aiding software by practicing lawyers including a general discussion of the potential and actual benefits of such software How decision aiding software enhances specific lawyer skills comprises the second and largest part of the work Among the topics discussed are computer aided counseling computer aided mediation legal policy evaluation and computer aided advocacy law prediction and legal administration In the third part Nagel assesses applications of decision aiding software to all fields of law with an emphasis on contracts property torts family law criminal law constitutional law economic regulation international law civil procedure and criminal procedure In a provocative concluding chapter he deals with the thorny issues of individual ethics and professional responsibility in the context of microcomputers Because decision aiding software encourages decision makers to be much more explicit about their goals than they otherwise would be its use raises questions as to whose goals should be pursued and to what degree This is a nuts and bolts guidebook that will be a valuable tool for practicing attorneys with some knowledge of microcomputers and is recommended reading for legal scholars and law students

Ecological Economics Joshua C. Farley, Herman E. Daly, Jon D. Erickson, 2005

Ecological economics addresses one of the fundamental flaws in conventional economics its failure to consider biophysical and social reality in its analyses and equations Ecological Economics Principles and Applications is an introductory level textbook that offers a pedagogically complete examination of this dynamic new field As a workbook accompanying the text this volume breaks new ground in applying the principles of ecological economics in a problem or service based learning setting Both the textbook and this workbook are situated within a new interdisciplinary framework that embraces the linkages among economic growth environmental degradation and social inequity in an effort to guide policy in a way that respects fundamental human values The workbook takes the approach a step further in placing ecological economic analysis within a systems perspective in order to help students identify leverage points by which they can help to affect change The workbook helps students to develop a practical operational understanding of the principles and concepts explored in the text through real world activities and describes numerous case studies in which students have successfully completed projects Ecological Economics A Workbook for Problem Based Learning represents an important new resource for undergraduate and graduate environmental studies courses focusing on economics environmental policy and environmental problem solving

Multiple Criteria Decision Analysis Salvatore Greco, Matthias Ehrgott, José Rui Figueira, 2016-02-18 In two volumes this new edition presents the state of the art in Multiple Criteria Decision Analysis MCDA Reflecting the explosive growth in the field seen during the last several years the editors not only present surveys of the foundations of MCDA but look as well at many new areas and new applications Individual chapter authors are among the most prestigious names in MCDA research and combined their chapters bring the field completely up to date Part I of the book considers the history and

current state of MCDA with surveys that cover the early history of MCDA and an overview that discusses the pre theoretical assumptions of MCDA Part II then presents the foundations of MCDA with individual chapters that provide a very exhaustive review of preference modeling along with a chapter devoted to the axiomatic basis of the different models that multiple criteria preferences Part III looks at outranking methods with three chapters that consider the ELECTRE methods PROMETHEE methods and a look at the rich literature of other outranking methods Part IV on Multiattribute Utility and Value Theories MAUT presents chapters on the fundamentals of this approach the very well known UTA methods the Analytic Hierarchy Process AHP and its more recent extension the Analytic Network Process ANP as well as a chapter on MACBETH Measuring Attractiveness by a Categorical Based Evaluation Technique Part V looks at Non Classical MCDA Approaches with chapters on risk and uncertainty in MCDA the decision rule approach to MCDA the fuzzy integral approach the verbal decision methods and a tentative assessment of the role of fuzzy sets in decision analysis Part VI on Multiobjective Optimization contains chapters on recent developments of vector and set optimization the state of the art in continuous multiobjective programming multiobjective combinatorial optimization fuzzy multicriteria optimization a review of the field of goal programming interactive methods for solving multiobjective optimization problems and relationships between MCDA and evolutionary multiobjective optimization EMO Part VII on Applications selects some of the most significant areas including contributions of MCDA in finance energy planning problems telecommunication network planning and design sustainable development and portfolio analysis Finally Part VIII on MCDM software presents well known MCDA software packages

Extreme Programming and Agile Processes in Software Engineering, 2005 Decision Theory and Multi-Agent Planning Giacomo Della Riccia, 2006-03-09 The work presents a modern unified view on decision support and planning by considering its basics like preferences belief possibility and probability as well as utilities These features together are immanent for software agents to believe the user that the agents are intelligent *Applications of Decision-aiding Software* Stuart S.
