Multicriteria Design R.B. Statnikov, 2013-03-09 This book is devoted to the PSI method Its appearance was a reaction to the unsatisfactory situation in applications of optimization methods in engineering After comprehensive testing of the PSI method in various fields of machine engineering it has become obvious that this method substantially surpasses all other available techniques in many respects It has now become known that the PSI method is successfully used not only in machine design at which it was initially aimed but also in polymer chemistry pharmacy nuclear energy biology geophysics and many other fields of human activity To all appearances this method has become so popular for its potential of taking into account the specific features of applied optimization better than other methods being at the same time comparatively simple and friendly and because unlike traditional optimization methods which are intended only for searching for optimal solutions the PSI method is also aimed at correctly formulating engineering optimization problems One well known aircraft designer once said To solve an optimization problem in engineering means first of all to be able to state this problem properly In this sense the PSI method has no competitors Although this method has been presented in Russia in numerous papers and books Western readers have had the opportunity to familiarize themselves with this method only recently Ozernoy 1988 Lieberman 1991 Stadler and Dauer 1992 Dyer Fishburn Steuer Wallenius and Zionts 1992 Steuer and Sun 1995 etc **Multicriteria**

Decision Aid Classification Methods Michael Doumpos, Constantin Zopounidis, 2006-04-18 The book discusses a new approach to the classification problem following the decision support orientation of multicriteria decision aid The book reviews the existing research on the development of classification methods investigating the corresponding model

development procedures and providing a thorough analysis of their performance both in experimental situations and real world problems from the field of finance Audience Researchers and professionals working in management science decision analysis operations research financial banking analysis economics statistics computer science as well as graduate students in management science and operations research Aspects of Semidefinite Programming E. de Klerk, 2002-03-31 Semidefinite programming has been described as linear programming for the year 2000 It is an exciting new branch of mathematical programming due to important applications in control theory combinatorial optimization and other fields Moreover the successful interior point algorithms for linear programming can be extended to semidefinite programming In this monograph the basic theory of interior point algorithms is explained This includes the latest results on the properties of the central path as well as the analysis of the most important classes of algorithms Several classic applications of semidefinite programming are also described in detail These include the Lov sz theta function and the MAX CUT approximation algorithm by Goemans and Williamson Audience Researchers or graduate students in optimization or related fields who wish to learn more about the theory and applications of semidefinite programming **Intelligent Decision Aiding Systems Based on Multiple Criteria for Financial Engineering** Constantin Zopounidis, Michael Doumpos, 2013-11-27 This book provides a new point of view on the field of financial engineering through the application of multicriteria intelligent decision aiding systems The aim of the book is to provide a review of the research in the area and to explore the adequacy of the tools and systems developed according to this innovative approach in addressing complex financial decision problems encountered within the field of financial engineering Audience Researchers and professionals such as financial managers financial engineers investors operations research specialists computer scientists management scientists and economists **Stable Parametric Programming** S. Zlobec, 2013-11-21 Optimality and stability are two important notions in applied mathematics This book is a study of these notions and their relationship in linear and convex parametric programming models It begins with a survey of basic optimality conditions in nonlinear programming Then new results in convex programming using LFS functions for single objective multi objective differentiable and non smooth programs are introduced Parametric programming models are studied using basic tools of point to set topology Stability of the models is introduced essentially as continuity of the feasible set of decision variables under continuous perturbations of the parameters Perturbations that preserve this continuity are regions of stability It is shown how these regions can be identified The main results on stability are characterizations of locally and globally optimal parameters for stable and also for unstable perturbations The results are straightened for linear models and bi level programs Some of the results are extended to abstract spaces after considering parameters as controls Illustrations from diverse fields such as data envelopment analysis management von Stackelberg games of market economy and navigation problems are given and several case studies are solved by finding optimal parameters The book has been written in an analytic spirit Many results appear here for the first time in book form Audience The book is written at the level

of a first year graduate course in optimization for students with varied backgrounds interested in modeling of real life problems It is expected that the reader has been exposed to a prior elementary course in optimization such as linear or non linear programming The last section of the book requires some knowledge of functional analysis Topics in Industrial Mathematics H. Neunzert, Abul Hasan Siddiqi, 2000-10-31 This book is devoted to some analytical and numerical methods for analyzing industrial problems related to emerging technologies such as digital image processing material sciences and financial derivatives affecting banking and financial institutions Case studies are based on industrial projects given by reputable industrial organizations of Europe to the Institute of Industrial and Business Mathematics Kaiserslautern Germany Mathematical methods presented in the book which are most reliable for understanding current industrial problems include Iterative Optimization Algorithms Galerkin's Method Finite Element Method Boundary Element Method Quasi Monte Carlo Method Wavelet Analysis and Fractal Analysis The Black Scholes model of Option Pricing which was awarded the 1997 Nobel Prize in Economics is presented in the book In addition basic concepts related to modeling are incorporated in the book Audience The book is appropriate for a course in Industrial Mathematics for upper level undergraduate or beginning graduate level students of mathematics or any branch of engineering *Handbook of Management under Uncertainty* Jaime Gil-Aluja, 2013-12-01 A mere few years ago it would have seemed odd to propose a Handbook on the treatment of management problems within a sphere of uncertainty Even today on the threshold of the third millennium this statement may provoke a certain wariness In fact to resort to exact or random data that is probable data is quite normal and convenient as we then know where we are going best where we are proposing to go if all occurs as it is conceived and hoped for To treat uncertain information to accept a new principle and from there determined criteria without being sure of oneself and confiding only in the will to better understand objects and phenomena constitutes and compromise with a new form of understanding the behaviour of current beings that goes even further than simple rationality Economic Science and particularly the use of its elements of configuration in the world of management has imbued several generations with an analytical spirit that has given rise to the elaboration of theories widely accepted by the international scientific community In this work we are proposing something a little more modest to use in the best possible way data and information that are available for drawing up and applying techniques and instruments that are useful for current reality within the world of businesses and institutions in an attempt to mislead ourselves as little as possible **Proceedings of the Second International Conference on Computational Intelligence and Informatics** Vikrant Bhateja, João Manuel R.S.
