Communications is at the core of the advanced interactive services that make up today's Information Society. Videoconferencing, teleworking, teleshopping, and video on demand will benefit from developments in broadband and mobile telecommunication systems, intelligent multimedia terminals, and digital signal processing. The latest research findings from these fields are presented here in the proceedings of the 10th Tyrrhenian Workshop on Digital Communications held in Ischia, Italy, September 19-24, 1998. Focus is placed on the following four areas: Signal Processing for Multimedia Communications, Modeling, Analysis, and Simulation of Multimedia Traffic Sources, Access Techniques, and Multimode Multimedia Terminals. In particular, multimedia services and applications are presented. This comprehensive collection of papers will enable the reader to keep pace with the rapid changes that are taking place in this field. Experts have co-operated with top research centers worldwide on an academic and industrial level to make this an up-to-date reference volume for all those who are concerned with technological advances in Multimedia Distributed Systems. ***Multimedia Communications*** Jerry D. Gibson, 2000-10-31. The rapid advances and industry demands for networked delivery of information and pictures through computer networks and cable television has created a need for new techniques and standards for the packaging and delivery of digital information. ***Multimedia Communications*** presents the latest information from industry and academic experts on all standards methods and protocols.
